-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

ABC Manufacturing has a heavily-used dual-band (2.4 / 5 GHz) WLAN, but sporadic RF interference across the 2.4 GHz band is causing dropped VoWiFi calls and leading to data connectivity and throughput problems. In addition to avoiding 2.4 GHz channels and installing a distributed spectrum analyzer to locate RF interference sources, what should the implementer do to resolve the problem fully?

- A. Have only guest access on the 5 GHz channels.
- B. Move all corporate data clients and VoWiFi devices to the 5 GHz channels appropriate for their regulatory domain.
- C. Use captive portals for guest authentication in 5 GHz.
- D. Implement WPA-PSK everywhere in the network.

Correct Answer: B

QUESTION 2

What is a radome?

- A. A type of semi-circular ceiling found in atriums and that is a heavy cause of RF reflection.
- B. A weatherproof piece of plastic covering an antenna or antenna system.
- C. The unit used to measure the signal reflected backward by the end of a cable.
- D. A piece of metal positioned behind APs mounted on outdoor poles, designed to limit the butterfly effect.

Correct Answer: B

QUESTION 3

You are on site, planning a network at a freight shipping company on a busy harbor. Since the preliminary WLAN design specifies support for the 5 GHz spectrum, you would like to test for radar pulses to determine if DFS channels should be supported at this facility. As a part of your spectral survey with a laptop-based analyzer, you include DFS testing to identify the presence of radar. This is done by manually observing Real-time FFT, Duty Cycle, and Active Devices charts of the spectrum analyzer software.

What potential drawback is present with this DFS test method?

- A. Many WLAN products that support DFS channels report several false positives. Ideally, the actual WLAN equipment used in the deployment should be used to test for DFS.
- B. Some sources of 5 GHz radar, such as military ships, are mobile in nature. A longer, automated test setup should be used to identify the presence or absence of radar.
- C. Manual identification of radar pulses using spectrum analysis charts can be very difficult due to radar's low amplitude at the Wi-Fi receiver.
- D. Modern spectrum analyzer adapters do not provide the necessary bandwidth resolution required to detect and

measure radar signatures.

Correct Answer: C

QUESTION 4

When performing an indoor predictive site survey to make the WLAN planning and design cycle more efficient, what is a best practice for configuration of the simulated APs in the predictive modeling software?

- A. All simulated APs should be set to 20 MHz channels only.
- B. Always use the default 2.2 dBi omnidirectional antenna patterns for simulated APs.
- C. If dynamic RRM will be used, AP transmit power should be set to an estimated average level of the expected client devices, such as 25 mW.
- D. Defining custom AP and antenna patterns will yield more accurate prediction data than the pre-configured vendor AP/antenna combinations.

Correct Answer: C

QUESTION 5

You are creating an outdoor bridge link that spans more than 1000 yards. Which one of the following antenna types is more likely to be included in the design?

- A. Yagi
- B. Omni
- C. Patch
- D. Panel

Correct Answer: A
