QUESTION 1

If you cascaded one switch to another, your total ports available to nodes would be .

A. the sum of the total ports, less the number of ports used for ISL connections

B. the sum of the total ports, divided by the number of switches in the fabric

C. the aggregate number of ports, less two ports forF_Port connections

D. the aggregate number of ports available in both switches

Correct Answer: A

QUESTION 2

On the CX700 array, which two statements will properly connect the SPE to the DAE2 enclosures? (Choose two.)

A. Back-end loop 1 connects to the first DAE2.

B. Back-end loop 0 connects to the second DAE2.

C. Additional DAE2s in each loop are attached by cabling the EXP ports to the PRI ports.

D. Back-end loop 1 connects to the second DAE2.

Correct Answer: CD

QUESTION 3

Which LUN duplication method would have the least initial performance impact on a source LUN to create and be the easiest and least costly to implement?

A. clone the source LUN, then mount it from a second host

B. take a snapshot of the source LUN, then mount it from a second host

C. mirror the source LUN to a second host

D. use SAN Copy to copy the source LUN

Correct Answer: B

QUESTION 4

You are concerned that the loss of an SP might cause you to lose all of your existing snapshot sessions.

What should you do to prevent losing existing snapshot sessions?

A. add a UPS to the storage array

B. usePowerPath to gain failover support

C. Nothing, the Vaulting process automatically saves all snapshots to disk in the PSM LUN.

D. select the Persistent mode when starting a snapshot session

Correct Answer: D

QUESTION 5

Which four statements are true of zoning in Dell / EMC Storage Area Networks (SANs)? (Choose four.)

A. Multiple initiators can participate in a single zone.

B. Both zoning by port address and by World Wide Name (WWN) can be implemented, but only WWN zoning is currently supported in D|E SANs.

C. Zoning is implemented at the switch level.

D. Zones are not limited by proximity within a SAN.

E. Zoning provides barriers or logical boundaries between different devices in a SAN.

Correct Answer: BCDE
