QUESTION 1

Click on the calculator icon in the upper left corner.

A customer's application uses five, 10 GB devices. A full volume local replica of the application is required every 4 hours. The customer requires each replica to be kept for 24 hours.

In this situation, how many replica devices are required?

- A. 5
- B. 20
- C. 30
- D. 50

Correct Answer: C

QUESTION 2

What is the correct sequence of steps to store objects in an object-based storage device (OSD)?

Select and Place:

Steps	Steps in Sequence
OSD node generates the unique object ID using a specialized algorithm	Step 1
Application server presents the file to be stored to the OSD node	Step 2
Acknowledgment is sent to the application server stating that the object is stored	Step 3
OSD node divides the file into two parts; user data and metadata	Step 4
OSD node stores the metadata, object ID, and the object	Step 5

Correct Answer:

Steps	Steps in Sequence
	Application server presents the file to be stored to the OSD node
	OSD node divides the file into two parts; user data and metadata
	OSD node generates the unique object ID using a specialized algorithm
	OSD node stores the metadata, object ID, and the object
	Acknowledgment is sent to the application server stating that the object is stored

QUESTION 3

When deploying a cold backup solution, what should be considered?

- A. Application must be shut down during the backup process
- B. Application can only read the data to be backed up
- C. An open file agent must be deployed to perform the backup
- D. Deduplication cannot be performed during the backup process

Correct Answer: A

QUESTION 4

An organization plans to deploy an array-based local replication solution. They identified that the change to the source volume is less than 30%. They need a solution in which the replica devices require a small fraction of the size of the source volumes.

Which solution should be recommended to the organization?

- A. Pointer-based virtual replication
- B. Continuous data protection
- C. Synchronous replication
- D. Pointer-based full volume replication

Correct Answer: A

QUESTION 5

What is a function of the policy engine in inter-array storage tiering?

- A. Facilitates moving inactive data from primary to secondary storage
- B. Creates a stub file in secondary storage pointing to data on the primary storage
- C. Ensures that primary and secondary storage have identical data for compliance
- D. Runs backup agent and determines the files to be copied to the secondary storage

Correct Answer: A
