-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which represents a common implementation of a storage network with limited scalability?

- A. CSMA/CD
- B. Fibre Channel Arbitrated Loop
- C. Store and Forward
- D. Switched Fabric

Correct Answer: B

QUESTION 2

What is a characteristic of target-based inline deduplication?

- A. Deduplication processing occurs on the client before backup data is sent to the backup device
- B. Backup data is stored on the backup device and then deduplication is performed
- C. Changes must be made in the backup software to implement deduplication
- D. Deduplication processing occurs at the backup device before it is stored on the backup device

Correct Answer: D

QUESTION 3

Which parameter determines the rotation latency of a disk drive?

- A. Speed of the spindle
- B. Seek time
- C. Data transfer speed
- D. Response time

Correct Answer: A

QUESTION 4

What is an accurate statement about the Network File System (NFS) protocol?

- A. Provides a set of remote procedure calls to access a remote file system
- B. Uses the server message block that provides file locking capability to a file system

- C. Translates block I/O requests from a file system into object-level requests
- D. Duplicates file systems on client workstations to ensure greater data scalability

Correct Answer: A

QUESTION 5

What is included as part of SAN accessibility monitoring?

- A. Fan-in/Fan out ratio
- B. Port status change
- C. ISL utilization
- D. Disk status

Correct Answer: B

Monitoring Network: Accessibility Storage networks need to be monitored to ensure proper communication between the server and the storage array. Uninterrupted access to data over the storage network depends on the accessibility of the physical and logical components in the storage network. The physical components of a storage network include switches, ports, cables, and power supplies. The logical components include constructs, such as zones. Any failure in the physical or logical components causes data unavailability. For example, errors in zoning, such as specifying the wrong WWN of a port, result in failure to access that port, which potentially prevents access from a host to its storage. EMC E10-001 Student Resource Guide. Module 14: Securing the Storage Infrastructure
