QUESTION 1

A customer wants to run backups where scheduling allows for shutting down the application during the backup window. Which backup method is used?

- A. Cold backup
- B. File copy
- C. Raw device dump
- D. Hot backup

Correct Answer: A

QUESTION 2

What is an example of a PCI connection?

- A. Parallel interface between a disk and the controller card
- B. Interconnection between a CPU and network card
- C. Serial connection between a disk and the controller card
- D. Interconnection between a tape drive and a computer

Correct Answer: B

QUESTION 3

Which Microsoft Volume Shadow Copy Service component is responsible for freezing and thawing the application's data during the creation of snapshots?

- A. Writer
- B. Requestor
- C. Provider
- D. Backup application

Correct Answer: A

QUESTION 4

A backup administrator wants to leverage the replication feature available on the storage array as an alternate source for backups. What is an advantage of this approach?

- A. Improves RPO
- B. Enables backups to be performed without a storage node
- C. Allows off-host backups to be performed
- D. Decreases storage utilization

Correct Answer: C

QUESTION 5

A customer is backing up data to a deduplication storage device. Deduplication levels are much lower than expected.

What is a possible reason for this?

- A. Backup data has too much commonality.
- B. Multiplexing is being used.
- C. Backups are occurring too often.
- D. Data is being sent over IP.

Correct Answer: B
