QUESTION 1

An architect is designing a cloud. The architect has decided to place the cloud management platform components on a separate set of compute, network, and storage infrastructure from the consumer resources. Why would the architect make this decision?

- A. Provide static and dedicated resources to the management applications without affecting the efficiency of consumer resource sharing
- B. Provide static and dedicated resources to the consumer applications without affecting the efficiency of the management applications
- C. Provide additional security to the management infrastructure by eliminating exposure to public-facing networks
- D. Provide separate billing for the management applications for the consumer's resources

Correct Answer: C

QUESTION 2

An organization wants to enable consumers to deploy IaaS and PaaS instances from a service catalog. These instances will all be deployed on a specific hypervisor. The organization has informed you that they want to use a preferred server vendor when building their new private cloud. What must be confirmed about the design?

- A. Server hardware is compatible with PaaS solution
- B. Server hardware is on the hypervisor vendor's compatibility list
- C. Server hardware is supported by the service catalog solution
- D. IaaS instances have the compatible drivers for the physical server hardware

Correct Answer: D

QUESTION 3

What is a benefit of a service catalog?

- A. Handles every IT request simultaneously
- B. Allows users to customize tenant roles
- C. Services do not have to meet the standards set by the business
- D. Enables the application of quotas on resources to control cost

Correct Answer: D

QUESTION 4

A cloud architect is evaluating an organization's need to support thousands of virtual machine instances and some form of encryption. Which encryption type should be selected and why?

- A. Storage array encryption to provide centralized management
- B. Full file systems encryption to simplify key management
- C. Network-based encryption to increase security at the cost of server overhead
- D. Self-encrypting storage devices to increase security at the cost of increased overhead

Correct Answer: B

QUESTION 5

After developing prototype applications in the public cloud, developers determined that they want software-defined network functionality. Which ability will this requirement provide for the developers?

- A. Programmatically provision an IPsec VPN tunnel between the public and private clouds
- B. Programmatically migrate layer-3 access from aggregate to access switches
- C. Programmatically control physical core network topologies
- D. Programmatically provision physical network segments and services

Correct Answer: D
