QUESTION 1

An architect is designing the compute resource pools for a cloud. As part of the deliverables, the architect has included the standard specifications for the physical servers to be used. The organization has provided estimates for future growth but has concerns about whether these estimates are accurate. What should be included in the design to address these concerns?

- A. A monitoring application and procedures for pool expansion
- B. A chargeback application and orchestration workflows to auto-scale pools
- C. A metering application and orchestration workflows to auto-scale pools
- D. A configuration management application and procedures for pool expansion

Correct Answer: A

QUESTION 2

An organization is implementing a backup solution for their private cloud. They are concerned that having the backup data stored onsite will expose them to lose in the event of a site-wide disaster. They are considering replicating the backup storage to an external site.

What are the design considerations involved with this replication solution?

- A. Ensuring proper hypervisor support and the availability of a federated single sign-on solution
- B. Ensuring network traffic encryption is considered and ensuring proper hypervisor support
- C. Ensuring sufficient network bandwidth is available and network traffic encryption is considered
- D. Ensuring proper hypervisor support and sufficient network bandwidth is available

Correct Answer: B

QUESTION 3

An organization plans to deploy many cloud-native applications that will generate a considerable amount of east-west traffic. The cloud-native applications will be deployed on hosts running hypervisors. Why would distributed routers be considered in this design?

- A. Enable network segment
- B. Improve network performance between hosts
- C. Minimize Internet traffic
- D. Protect against a physical router failure

Correct Answer: B

QUESTION 4

Which set of general criteria should the cloud architect consider when selecting a cloud management platform?

- A. Multi-tenancy, API version, and cross-platform awareness
- B. Hypervisor, hybrid cloud capabilities, and authentication
- C. Geographic region, networked storage, and Internet access
- D. Network storage, operating system drivers, and update services

Correct Answer: B

QUESTION 5

What is a benefit of a service catalog?

- A. Handles every IT request simultaneously
- B. Allows users to customize tenant roles
- C. Services do not have to meet the standards set by the business
- D. Enables the application of quotas on resources to control cost

Correct Answer: D
