QUESTION 1

A cloud architect has included a monitoring application in a cloud design to ensure infrastructure performance meets agreed-upon service levels. The application resides on a virtual appliance. The application vendor provides guidance for sizing the appliance.

What will be part of the sizing calculations for the virtual appliance storage?

A. Number of targetsMessage bus subscribers Data deduplication policies

B. Number of segments Number of metrics Data deduplicaiton policies

C. Number of targetsNumber of metrics Data retention policies

D. Message bus subscribers Number of users Data retention policies

Correct Answer: C

QUESTION 2

Which infrastructure does VCE Vblock represent?

A. Brownfield

B. Traditional

C. Hyper-converged

D. Converged

Correct Answer: D

QUESTION 3

Which aspect of the project definition does the cloud design scope provide?

A. Broad directions for the project

B. Boundaries of what the project should and should not include

C. Sales figures that must be met when designing the project

D. Specific features or functions that must be included in the project

Correct Answer: D

QUESTION 4

An organization wants to deploy a block storage in the cloud using a storage array that is accessible through the iSCSI

protocol. The hosts support iSCSI.

Why would network segmentation be included in the design to support this requirement?

A. Secure all traffic between the storage array and the hosts

B. Enable CHAP between the array and hosts

C. iSCSI traffic is not supported on networks with other types of traffic

D. Enable LUN masking capabilities of the array

Correct Answer: D

QUESTION 5

What is an advantage of using a brownfield infrastructure?

A. Avoids upgrades to existing infrastructures

B. Promotes staff familiarity with technology

C. Enables migration to new technologies

D. Avoids older and less efficient processes

Correct Answer: B
