QUESTION 1

A customer has asked you to design an EMC Avamar and Data Domain integrated solution for their environment. As you review the design for the Microsoft Exchange portion of the solution, the customer would like you to explain the backup process.

How would you respond?

- A. Work order is received from the Avamar server, backup data is sent to the Data Domain appliance, and then metadata is sent to the Avamar server
- B. Avamar instructs the Exchange server to send both backup data and metadata to the Data Domain appliance
- C. Work order is sent from the Avamar Management Console to the Exchange server, and then data and metadata are sent to the Avamar system
- D. Exchange API, using a plug-in, sends all data directly to the Data Domain appliance

Correct Answer: A

QUESTION 2

An EMC NetWorker customer is considering backup options for their VMware environment. What is an advantage of using the VMware Console Backup option?

- A. File-level restore granularity
- B. No proxy server is required
- C. No load on the ESX server during backups
- D. Application backup data is crash-consistent

Correct Answer: B

QUESTION 3

An EMC NetWorker customer is planning on directing the backups of a database server to the single-engine EMC Disk Library (EDL) as shown in the exhibit. The data to be backed up is accessed by the host through a redundant connection and resides on primary storage.

Based on EMC best practice, what needs to be adjusted in the solution?

- A. Add a separate HBA to the dedicated storage node for EDL traffic
- B. Replace the dedicated storage node with a standard storage node
- C. Add a proxy host
- D. Implement a second single-engine EDL for redundancy

Correct Answer: A

QUESTION 4

Scenario

A customer is currently using third-party backup software for Oracle backups and writing backups to third-party physical tape libraries and a VTL. Backups sent to the VTL are then vaulted to tape and transported daily from the primary data center to the third-party facility.

They are experiencing high backup job failures with backup success rates of approximately 65%. In addition, their time to disaster recovery readiness for backups is greater than 24 hours. The retention period for database backups from disk-based backup is 4 weeks.

The customer is looking for a solution that will meet the following requirements:

Oracle DBA to manage backups through Oracle RMAN Backup their file system data using EMC backup software
Perform monthly full backups directly to physical tapes for offsite storage
Reduce the backup window to the possible

maximum Increase the time to disaster recovery readiness. Increase the retention period for database backups from disk-based backup to 6 weeks No additional WAN bandwidth requirements Low TCO solution Free up the Fiber Channel switch infrastructure Increase operational efficiency Refer to Scenario .

The customer is considering using an EMC Data Domain system. They would like to have a copy of the Oracle RMAN backups at their primary and disaster recovery sites.

Which Data Domain licenses are required for this solution while meeting the customer's requirements?

- A. DD Boost and Replication
- B. VTL and Replication
- C. Gateway and Replication
- D. Global Deduplication and Replication

Correct Answer: A

QUESTION 5

A customer is using Data Protection Advisor (DPA) to monitor their backup environment. What is a benefit of using remote Collectors?

- A. Reduces the amount of information being transferred to the DPA server
- B. Collects system-related statistics for a given host
- C. Improves the collection performance of backup statistics
- D. Provides more complete backup reports

Correct Answer: B
