QUESTION 1

Which access policy must be specified when implementing a multi-protocol solution with NFS version 4?

- A. Mixed/mixed compat
- B. Native
- C. NT
- D. UNIX

Correct Answer: A

QUESTION 2

A customer has sites two sites 4,800 kms apart. The administration team requires a data replication solution but not necessarily a disaster recovery solution.

At the first site, the team requires the ability to have a read-only copy that can be used for backups and application testing. Which Celerra solution would best meet this requirement?

- A. Celerra SRDF/S
- B. FarCopy
- C. NearCopy
- D. SnapSure

Correct Answer: B

QUESTION 3

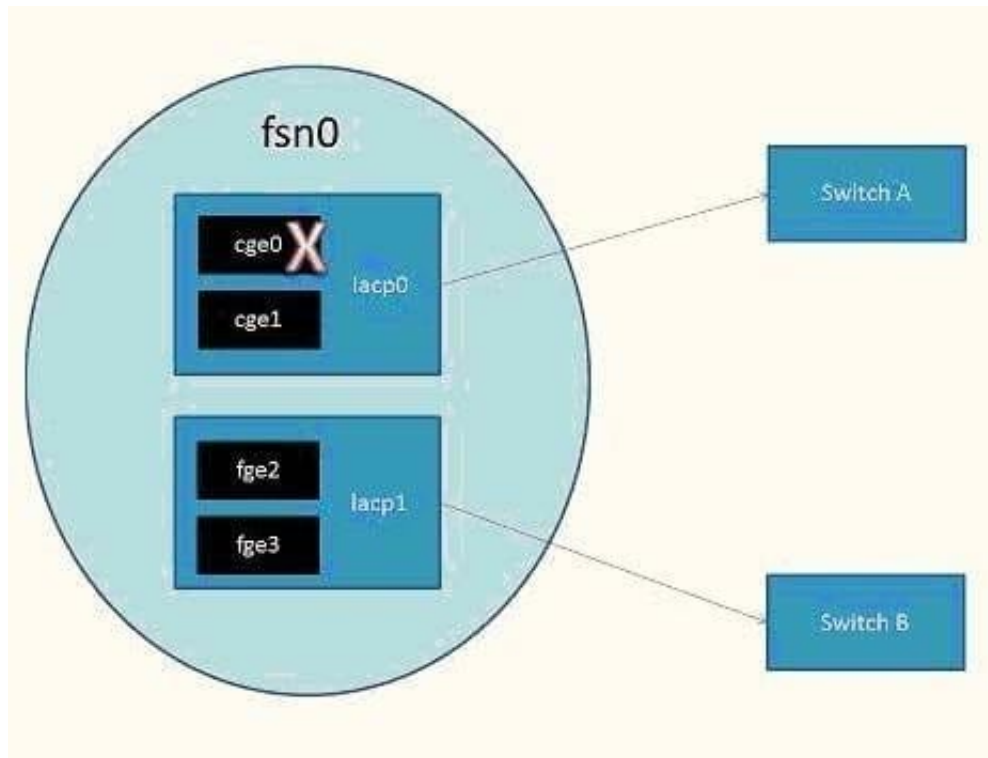

A customer needs to allocate additional space to Exchange servers. These servers cannot be taken offline to add the necessary storage required. Which Celerra-based solution can be recommended?

- A. DFS
- B. iSCSI
- C. LACP
- D. NMFS

Correct Answer: B

QUESTION 4

Refer to the exhibit:

Both virtual devices (lACP0 and lACP1) are used to create another virtual device "fsn0". lACP0 is the primary.

What happens if only cge0 fails?

- A. Traffic from cge0 will be redirected toward cge1, but lACP0 will still be the active path.
- B. Traffic from lACP0 will be redirected toward lACP1, and manual intervention will be required to make lACP0 the active path again.
- C. Traffic from lACP0 will be redirected toward lACP1 only, while cge0 is in a failed state.
- D. Traffic normally traversing cge0 on lACP0 is now redirected to fge2 on lACP1.

Correct Answer: A

QUESTION 5

What default authentication mechanism is utilized in a Windows Native mode environment?

- A. Challenge/Response
- B. Kerberos
- C. NTLM
- D. SSH

Correct Answer: B
