-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You are provisioning a LUN on a VNX array with FAST VP enabled. In addition to Highest Tier Available and Lowest Tier Available, what other tier option(s) is displayed?

- A. Auto-Tier, No Data Movement
- B. Optimize for Performance
- C. Auto-Tier
- D. Optimize for Performance, No Data Movement

Correct Answer: C

Explanation:

The following table lists and describes the FAST policy settings. The FAST policy defines both initial tier placement and ongoing automated tiering of data. The sub-LUN data blocks are relocated according to the data relocation schedule which the user can customize.

Tiering policy	Corresponding initial tier placement	Description
Auto-Tier	Optimize for Pool Performance	The software distributes the initial data placement across all drive types in the pool, to maximize spindle usage for the LUN. Subsequent data relocation is based on the LUN performance statistics such that data is relocated among tiers according to I/O activity.
Highest Available Tier	Highest Available Tier	Sets the preferred tier for initial data placement and subsequent data relocation (if applicable) to the highest performing disk drives with available space.
Lowest Available Tier	Lowest Available Tier	Sets the preferred tier for initial data placement and subsequent data relocation (if applicable) to the most cost-effective disk drives with available space.
No Data Movement	No Data Movement	Prevents any ongoing data movement for this LUN. The current placement of data is retained. Only available as a LUN property after the LUN is created.

QUESTION 2

A Linux host has been set up and successfully connected to the VNX array, but the local administrator cannot issue CLI commands.

What is a possible explanation of this behavior?

- A. The local administrator was not added to the host agent configuration file
- B. The host is only connected to one SP on the VNX array.
- C. The host agent must be stopped for the utility to work.
- D. Linux iSCSI CHAP data was entered on the target, but not the initiators.

Correct Answer: A

QUESTION 3

According to EMC best practices, how many Primary Usermappers are recommended in a multiple VNX array environment?

- A. One per VNX frame
- B. One per Data Mover
- C. One per VNX environment
- D. One per CIFS server

Correct Answer: C

QUESTION 4

What can be found from the Virtualization Host page in the VNX Unisphere Manager GUI?

- A. Block connected ESXi Servers
- B. Wizard for discovering block connect ESXi Servers
- C. File connected ESXi Servers
- D. NFS datastores

Correct Answer: A

QUESTION 5

What is the preferred method for partitioning VNX iSCSI LUNs attached to a Windows Server 2003 host?

- A. Disk Management
- B. Fdisk
- C. Diskpart
- D. format

Correct Answer: C
