QUESTION 1

Users complain that it takes several seconds to get the result for DQL queries on dm_document searching for keywords. Your database administrator says that the disk I/O rate on the database machine is consistently high and no other change can be made to the database hardware. The database and Content Server run on separate hosts. How could you solve this problem on the Content Server?

- A. add more or faster CPUs on the Content Server machine
- B. create a selective database index against the dmr_content_s table
- C. create a database index on the keywords column of the dm_sysobject_r table
- D. buy faster disks for storing the Documentum content

Correct Answer: C

QUESTION 2

You need to plan the restore of a cold backup of your repository. What is the correct restore procedure for a cold backup?

- A. 1. stop the index server2. stop the file server3. stop the database4. restore the index vault5. start the index server6. restore the file server7. start the file server8. restore the database9. start the database
- B. 1. stop all software that works with the Content Server2. stop the repository3. stop the database4. restore the database5. restore each content storage area6. start the database7. start the repository8. start all software that works with the Content Server
- C. 1. stop all software that works with the Content Server2. stop the repository3. stop the database4. restore the database5. restore each content storage area from /dev/null6. start the database7. start the repository8. start all software that works with the Content Server
- D. 1. stop all software that does not work with the Content Server2. restart the operating system3. import the database4. restore each content vault5. recover the database6. restore the repository.key file7. start the repository8. start all software that works with the Content Server

Correct Answer: B

QUESTION 3

A developer has given you a custom application using DFC which reports its initialization and completion. You want to monitor this information on an ongoing basis. Which file should you configure to do this?

- A. dfc.properties
- B. log4j.properties
- C. dbor.properties
- D. dmjdbcpool.properties

Correct Answer: B

QUESTION 4

In Documentum Administrator (DA) 6.5 and later, what must be done to make all DA features visible to system administrators?

- A. No action is required; system administrators have access to all DA features.
- B. You must add all system administrators users to the group adminingroup.
- C. You must create one or more administrator access sets and configure each to expose only those DA features which are needed.
- D. You must configure the user's extended privileges such that he/she has access to the desired DA features.

Correct Answer: C

QUESTION 5

What is the meaning of the term RAID 1+0?

- A. RAID 1+0 means 1 plus 0 equaling to 1, resulting in RAID 1, which is disk mirroring only.
- B. RAID means "redundant array of independent or inexpensive disks" and uses the EMC Centera as they use inexpensive disks in there. The number 1 means that only one EMC Centera will be used.
- C. In comparison to RAID 5, which makes use of five disks, RAID 1+0 means that only one disk is needed.
- D. RAID 1+0 means disk mirroring for more safety and partition striping among several disks for better I/O performance.

Correct Answer: D
