QUESTION 1

A Content Server is running near 100% CPU usage and does not absolutely peak. The hardware contains two CPU cores, and two additional CPU cores are added. After the change, the system runs at almost 70% CPU usage.

How do you explain why the system is not running at 50% after the change?

- A. The Java Method Server will dynamically allocate resources based on availability.
- B. The Content Server will increase its CPU usage to fill available capacity regardless of demand.
- C. Machine overhead for managing task sharing between processors increases with the number of processors.
- D. The agent executive will run more jobs at a time when more processor capacity is available.

Correct Answer: C

QUESTION 2

Which statement is true about Content Storage Services (CSS) "standard" rules?

- A. Content can be migrated based on the value of the object's object_name property.
- B. Content can be migrated based on the value of the object's subject property.
- C. Content can be migrated based on the object's file format.
- D. Content can be migrated based on the object's lifecycle state.

Correct Answer: C

QUESTION 3

How do you check the version of a repository?

- A. select r_server_version from dm_docbase_config
- B. select r_version_label from dm_server_config
- C. select r_server_version from dm_server_config
- D. select r_version_label from dm_docbase_config

Correct Answer: C

QUESTION 4

A user is not able to create a document in a repository. How do you diagnose the problem?

- A. check for sufficient swap space/virtual memory and check for sufficient database space
- B. check for sufficient file storage space and check for sufficient database space
- C. check for sufficient file storage space and check for sufficient swap space/virtual memory
- D. check that the server log is not full

Correct Answer: B

QUESTION 5

After a new Webtop installation, users are reporting the following error when editing or viewing a document: Failed to retrieve content from ACS/BOCS servers(s). The ACS/BOCS server(s) may be down or your machine may not be able to reach the server(s) due to network connectivity or configuration issues.

com.documentum.ucf.common.UCFException: All remote hosts failed... What could be the problem?

- A. The Unified Content Facilities (UCF) have not deployed properly to the client workstations.
- B. The host name in the acs_base_url attribute of the Accelerated Content Services (ACS) configuration object is not known on the client side.
- C. There is an error with the Branch Office Caching Services (BOCS) definition in the Webtop app.xml file.
- D. An incorrect host or port number is specified in the [DOCBROKER_PRIMARY] section of the dmcl.ini on the application server hosting Webtop.

Correct Answer: B
