QUESTION 1

What is the function of Persistent Binding in an EMC NetWorker SAN environment?

- A. Prevent device ordering changes
- B. Prevent WWPN changes
- C. Prevent silent SCSI bus resets
- D. Prevent a tape label/barcode mismatch

Correct Answer: A

QUESTION 2

An EMC NetWorker administrator wants to create a new custom notification. The notification needs to send an e-mail with a warning severity when a backup failure of a savegroup occurs.

Which attribute is configured to send the notification to e-mail?

- A. Action
- B. Priority
- C. Event
- D. Alert

Correct Answer: A

QUESTION 3

In EMC NetWorker, what is a characteristic of a probe-based group backup?

- A. Name of the probe script must begin with "nsr" or "save"
- B. Probe script must reside on a user-defined directory
- C. A group does not allow multiple probes to be run
- D. Probe processing occurs throughout the day

Correct Answer: A

QUESTION 4

An EMC NetWorker backup job has failed 95% of the way through its operation.

Which functionality is provided by the checkpoint restart feature?

- A. The backup can continue from the last known good point
- B. The backup can always continue exactly where it left off
- C. The backup can be merged with data from the last server checkpoint
- D. The backup must be restarted from the beginning

Correct Answer: A

QUESTION 5

What happens when an EMC NetWorker AFTD becomes full while backups are running?

- A. Backups are paused; aborted and expired save sets are deleted.
- B. Backups are paused; the oldest save sets are staged.
- C. Backups fail; simultaneous restore jobs continue.
- D. Backups span to another volume.

Correct Answer: A
