QUESTION 3

An organization is deploying services in an existing private cloud. The lines of business have concerns about service performance in planned services. How should IT address these performance concerns?

- A. Cloud architect defines appropriate performance in the cloud design.
- B. Service manager defines appropriate performance in the SLA.
- C. Cloud administrator defines appropriate performance in the SLA.
- D. Cloud administrator defines appropriate performance in the cloud design.

Correct Answer: B

QUESTION 4

An organization will be deploying services in a new private cloud infrastructure. The organization has a strong enterprise and IT governance framework in place.

How will this framework likely be enhanced in the new cloud environment?

- A. Policies will be added that support each component of the service lifecycle
- B. Policies will be added that support the addition of availability zones
- C. The enterprise governance board will be expanded to include cloud architects
- D. IT silos will be replaced with a business oriented framework

Correct Answer: A

QUESTION 5

You are designing a cloud services architecture for a company. You have determined that running some of the customer facing applications the company uses in a public cloud would save a significant amount of money but the security

department wants to retain control of customer data at rest. The application infrastructure consists of two database servers and eight web servers.

How can you architect the application to minimize the risk involved with data exposure?

- A. Host the application servers in the public cloud and host the databases in the private cloud.
- B. Scale the application horizontally by utilizing a hybrid cloud where the application and database are mirrored a public cloud.
- C. Cluster four of the application servers and one database server in the public cloud and the remaining servers in the private cloud.
- D. Host the application servers and database servers in the public cloud and set up RBAC to restrict access to the applications

Correct Answer: A
