QUESTION 1

Which action will take place when a failover trigger is detected by the active system?

- A. The active device will take the action specified for the failure.
- B. The standby device also detects the failure and assumes the active role.
- C. The active device will wait for all connections to terminate and then fail-over.
- D. The standby device will begin processing virtual servers that have failed, but the active device will continue servicing the functional virtual servers.

Correct Answer: A

QUESTION 2

How is MAC masquerading configured?

- A. Specify the desired MAC address for each VLAN for which you want this feature enabled.
- B. Specify the desired MAC address for each self-IP address for which you want this feature enabled.
- C. Specify the desired MAC address for each VLAN on the active system and synchronize the systems.
- D. Specify the desired MAC address for each floating self-IP address for which you want this feature enabled.

Correct Answer: A

QUESTION 3

Which two methods can be used to determine which BIG-IP is currently active? (Choose two.)

- A. The bigtop command displays the status.
- B. Only the active system's configuration screens are active.
- C. The status (Active/Standby) is embedded in the command prompt.
- D. The ifconfig -a command displays the floating addresses on the active system.

Correct Answer: AC

QUESTION 4

Which IP address will the client address be changed to when SNAT automap is specified within a Virtual Server configuration?

- A. The floating self IP address on the VLAN where the packet leaves the system.

- B. The floating self IP address on the VLAN where the packet arrives on the system.
- C. It will alternate between the floating and non-floating self IP address on the VLAN where the packet leaves the system so that port exhaustion is avoided.
- D. It will alternate between the floating and non-floating self IP address on the VLAN where the packet arrives on the system so that port exhaustion is avoided.

Correct Answer: A

QUESTION 5

Assuming there are open connections through an active system's virtual servers and a fail-over occurs, by default, what happens to the connections?

- A. All open connections are lost.
- B. All open connections are maintained.
- C. When persistence mirroring is enabled, open connections are maintained even if a fail-over occurs.
- D. Long-lived connections such as Telnet and FTP are maintained, but short-lived connections such as HTTP are lost.
- E. All open connections are lost, but new connections are initiated by the newly active BIG-IP, resulting in minimal client downtime.

Correct Answer: A
