QUESTION 1

Which of the following describes the unit of containment that an application is constrained to on an operating system?

- A. Process
- B. Directory
- C. Console
- D. Thread

Correct Answer: A

QUESTION 2

A startup company has created a logo. The company wants to ensure no other entity can use the logo for any purpose. Which of the following should the company use to BEST protect the logo? (Choose two.)

- A. Patent
- B. Copyright
- C. NDA
- D. Trademark
- E. EULA

Correct Answer: BD

QUESTION 3

Which of the following database design requirements is MOST likely a reason to implement a flat file?

- A. Data type flexibility
- B. Scalability
- C. Simplicity
- D. Search speed

Correct Answer: C

QUESTION 4

A systems administrator wants to return results for a time range within a database. Which of the following commands should the administrator use?

- A. SELECT
- B. INSERT
- C. DELETE
- D. UPDATE

Correct Answer: A

Data Manipulation Language (DML) commands allow you to insert or update records and extract information from records for viewing (a query):

INSERT INTO TableName—adds a new row in a table in the database.

UPDATE TableName—changes the value of one or more table columns. This can be used with a WHERE statement to filter the records that will be updated. If no WHERE statement is specified, the command applies to all the records in the

table.

DELETE FROM TableName—deletes records from the table. As with UPDATE, this will delete all records unless a WHERE statement is specified.

SELECT—enables you to define a query to retrieve data from a database.

QUESTION 5

A user wants to create a link between two tables in a database. Which of the following is the user MOST likely to use?

- A. Primary key
- B. Index
- C. Foreign key
- D. Constraint

Correct Answer: C
