QUESTION 1

ASP.NET version 2.0 health monitoring supports an _____.

- A. Event driven model
- B. Event provider model
- C. Event log model
- D. Event API model

Correct Answer: B

QUESTION 2

You work as a Software Developer for ABC Inc. The company uses Visual Studio.NET as its application development platform. You create an application using the .NET Framework. You need to use the regular expressions to provide a concise and flexible means for identifying strings of text of interest, such as particular characters, words, or patterns of characters. Which operation will you use to construct the regular expressions?

Each correct answer represents a complete solution. Choose all that apply.

- A. Quantification
- B. Grouping
- C. Alternation
- D. Phishing

Correct Answer: ABC

QUESTION 3

You work as a Software Developer for ABC Inc. The company uses Visual Studio.NET 2005 as its application development platform. You have recently finished the development of a class named TestCase and you have used only reference types in the class. The class will be used in an application that will use pointers. Therefore, you are required to convert the reference types to pointers in the class. Which of the following keywords will you use to accomplish the task?

- A. base
- B. virtual
- C. override
- D. unsafe

Correct Answer: D

QUESTION 4

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2008 as its application development platform. You have recently finished the development of an ASP.NET Web application using .NET Framework 3.5.

The application must be deployed by using the `http://www.ABC.com/` URL. The application has several Web forms.

You need to implement Really Simple Syndication (RSS) feeds functionality. The RSS feeds will be used by the `http://www.ABC.com/Updates.rss` URL. You must ensure that the application displays the RSS-formatted information when

accessing the given URL. What will you do to accomplish this?

Each correct answer represents a part of the solution. Choose two.

- A. Create and register a custom `HttpHandler` class that releases the RSS feeds.
- B. Create a Web form named `Updates` that releases the RSS feeds.
- C. Create an ASMX Web service component named `Updates`.
- D. Add the `HttpHandler` class to the `.rss` extension.
- E. Create and register a custom `HttpModule` class.

Correct Answer: AD

QUESTION 5

John works as a Web Developer for TechCom Inc. He creates an ASP.NET application, named `MyApp1`, using Visual Studio .NET. Only registered users of the company will be able to use the application. The application contains a page, named `NewAccount.aspx` that allows new users to register themselves to the registered user list of the company. The `NewAccount` page contains several `TextBox` controls that accept users' personal details such as username, password, confirm password, first name, last name, home address, zip code, phone number, etc. One of the `TextBox` controls on the page is named `txtZipCode` in which a user enters a Zip code. John wants to ensure that when a user submits the `NewAccount` page, `txtZipCode` must contain five numeric digits. He wants least development effort. Which of the following validation controls will he use to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. `RequiredFieldValidator`
- B. `RegularExpressionValidator`
- C. `CompareValidator`
- D. `RangeValidator`

Correct Answer: AB
