QUESTION 1

In cloud data center migration scenarios, database migration involves the database itself and does not involve service systems, networks, or storage devices.

- A. True
- B. False

Correct Answer: B

QUESTION 2

In the server migration scenario, the ERP application system on a UNIX server is migrated to another UNIX server without recompilation or development. The hardware platform of the target server can be different from that of the source server.

- A. True
- B. False

Correct Answer: B

QUESTION 3

Large-scale cloud data centers use regions, AZs, and DCs to organize resources and ensure security management.

- A. True
- B. False

Correct Answer: A

QUESTION 4

In distributed storage, when a file is stored, the file is divided into different RAID backup modes. The split files are stored on different servers to ensure that one server is faulty, services are not interrupted due to file or data loss.

- A. True
- B. False

Correct Answer: A

QUESTION 5

A connection mode between the DAS and the server. The storage device is directly connected to the server through

cables (such as optical fibers). Which of the following statements are correct?

- A. The system needs to be powered off when the core components of the DAS are maintained
- B. When multiple hosts are connected to the DAS, services of different service levels can be provided
- C. The number of ports that can be connected to the host is limited
- D. The DAS with insufficient storage space can share the remaining space of the DAS with excessive storage resources

Correct Answer: B
