⚙ **800,000+** Satisfied Customers

QUESTION 1

A backup environment consists of StoreOnce appliances and HP storeEver libraries. A new SLA policy requires that backed up data cannot be overwritten for three months. How can the data be managed by HP Data Protector Software?

A. By using relative dates in catalog protection

B. By configuring housekeeping schedules in HP StoreOnce GUI

C. By specifying media data protection

D. By using job scheduler

Correct Answer: A

The simplified graph in Figure 3 presents the difference in IDB growth when catalog protection is set for a relatively short period of time (one month) versus when the catalog protection is the same as data protection (3 years). Also, the difference in usage of the Log all or Log directories options is shown. The major growth of the IDB lasts until the catalog protection has been reached. After that, the growth is low and determined by the growth of the backup environment.

QUESTION 2

How can server performance degradation be avoided during backup in a large virtualized environment with HP Data Protector?

A. Utilize VMware ESX Server Snapshots

B. Use HP StoreOnce D2DBS generic library emulation

C. Configure target side deduplication

D. Implement zero downtime Backup

Correct Answer: D

QUESTION 3

Which statement is accurate when an HP BladeSystem customer is interested in the HP Virtual Connect FlexFabric Flat SAN feature?

A. Virtual Connect fabric-attached and direct-attached SAN fabrics can not be mixed on the same Virtual Connect domain.

B. When using the direct-attach mode, participating uplinks must be directly connected to an HP 3PAR StoreServ Storage System.

C. The direct-attach mode supports connecting HP Enterprise Virtual Array and HP StoreServ Storage.

D. Virtual Connect Enterprise Manager licenses are required.

Correct Answer: B

QUESTION 4

Which product supports the implementation of a new storage solution using Adaptive Optimization?

A. HP StoreVirtual 4330

B. HP StoreVirtual 4730

C. HP StoreVirtual VSA

D. HP StoreVirtual 4530

Correct Answer: A

QUESTION 5

Which rule applies when designing a routed HP StoreVirtual 4000 Remote Copy environment to replicate data from a branch office to the main data center?

A. The two IP subnets must have IP routes to each target network with forwarding.

B. The two IP subnets must have IP routes to each target network with direct access mode configured.

C. The two IP subnets must have IP routes to each target network without network address translation.

D. The two IP subnets must have IP routes to each target network without a private VPN tunnel used.

Correct Answer: C

IP networking requirements You can use HP P4000 remote copy from one cluster to another cluster on a single IP subnet as well as across routed environments. In a routed environment, the two IP subnets must have IP routes to each target network without network address translation (NAT) or port forwarding. You can employ private WAN connections using point-to-point protocols, or you can set up a VPN tunnel between two networks that are separated by the public Internet. The VPN tunnel effectively acts as one hop on a router and will allow the use of private IP space on each end. http://h17007.www1.hp.com/docs/justrightit/HP%20StoreVirtual% 20P4000%20Networking %20Recommendations.pdf
