QUESTION 1

Refer to the exhibit. Exhibit: Network topology

A company has implemented a switched network based on the RSTP spanning tree protocol. Assume the following:

All switches have the same priority

All ports have the same cost

All ports have the same priority

Based on this information, which answer is correct?

- A. Port 2 on SwitchC is a designated port.
- B. Port 3 on SwitchC is a designated port.
- C. Port 1 on SwitchB is a discarding port.
- D. Port 1 on SwitchD is a root port.

Correct Answer: B

MSTP selects the device with the lowest MAC address as the root bridge, so in this case it is SwitchD. The root bridge is the only bridge in the network that does not have a root port. All other bridges receive BPDUs on at least one port.

QUESTION 2

When configuring MSTP, how should VLANs be separated to perform load balancing?

- A. Placed into separate instances
- B. Placed into separate Regions
- C. Never configured with more than one VLAN per instance
- D. Configured with different priority values

Correct Answer: A

QUESTION 3

Refer to the exhibit.

Exhibit: HP ProVision command output

ProVision # show ip route static

IP Route Entries

Destination	Gateway	VLAN	Type	Sub-Type	Metric	Dist.
10.10.20.177/32	reject		static		1	1
10.10.40.0/24	VLAN10	10	static		1	1
10.10.50.128/27	VLAN10	10	static		1	1
10.11.30.0/24	blackhole		static		1	1
127.0.0.0/8	reject		static		0	1

What does the term "blackhole" mean for the 10.11.30.0/24 route?

- A. The switch will drop all traffic sourced from 10.11.30.0/24 and will send an ICMP message to the source.
- B. The switch will drop all traffic sourced from 10.11.30.0/24 and will not send an ICMP message to the source.
- C. The switch will drop all traffic destined to 10.11.30.0/24 and will not send an ICMP message to the source.
- D. The switch will drop all traffic destined to 10.11.30.0/24 and will send an ICMP message to the source.

Correct Answer: C

QUESTION 4

Refer to the exhibit. Exhibit: Network topology

The network consists of two IP ProVision Switches with routing disabled. How should the network administrator configure the link between Switch A and Switch B to ensure all hosts can communicate to all the other hosts within their respective VLANs?

- A. Tagged for VLAN 20 and tagged for VLAN 30
- B. Tagged for VLAN 10 and tagged for VLAN20
- C. Untagged for VLAN 10 and tagged for VLAN 30
- D. Untagged for VLAN 10 untagged for VLAN 20, and tagged for VLAN 30

Correct Answer: B

QUESTION 5

A network administrator has a network of HP ProVision switches with operator and manager passwords configured. The network administrator uses the copy config startup-config tftp pc command on each switch to save all the switch configuration to a TFTP server. The network administrator copies the configuration from one HP ProVision 3800 switch to an identical HP ProVision 3800 switch. The new switch no longer prompts for an operator or manager passwords.

What is the cause of this problem?

- A. The passwords must be saved by using a separate TFTP transfer with the copy passwords tftp pc command.
- B. The passwords cannot be restored they contain special characters misunderstood by the TFTP server.
- C. The passwords cannot be restored by default, to the startup-config file on the switch when executing the write memory command.

Correct Answer: C
