### QUESTION 1

A network administrator executes these commands on an HP Comware switch:

```
[Comware] super password level 1 simple hp1 [Comware] super password level 2 simple hp2 [Comware] super password level 3 simple hp3 [Comware] quit
```

The network administrator then executes this command to test the configuration:

```
super 0
```

What is the outcome of the configuration?

- A. The network administrator is immediately placed into Monitor view.
- B. Access is denied because no level 0 password has been defined.
- C. A password of hp0 must be entered to access the view.
- D. The network administrator is immediately placed into visitor view.

Correct Answer: D

---

### QUESTION 2

Which wireless technology is limited to operate in a frequency range with only three non- overlapping channels?

- A. 802.1a
- B. 802.1x
- C. 802.1ad
- D. 802.11g

Correct Answer: D

802.11b (and 802.11g) networks offer 11 channels, but only three channels (1, 6, and 11) do not overlap with each other. In a large-scale building or campus-wide installation, the ability to use only three channels can reduce real-world throughput and make avoiding interference from other 802.11b or 802.11g-based wireless networks difficult.

---

### QUESTION 3

On an HP Comware switch, which view must an administrator access in order to execute the debug command?

- A. Manager
- B. Operator

C. System

D. User

Correct Answer: D

---

#### QUESTION 4

A customer is implementing a network using HP ProVision switches.

Which default setting applies to the ProVision switches?

A. SSH is enabled

B. All Ports are disabled

C. Routing is enabled

D. A static IP address is assigned to VLAN 1

Correct Answer: A

---

#### QUESTION 5

Which open standard allows a switch with PoE support to correctly determine the power requirements of a connected device?

A. ICMP

B. AutoPower

C. LLDP-MED

D. CDP

Correct Answer: C

The Link Layer Discovery Protocol (LLDP) is a vendor-neutral link layer protocol in the Internet Protocol Suite used by network devices for advertising their identity, capabilities, and neighbors on an IEEE 802 local area network, principally wired Ethernet. Media Endpoint Discovery is an enhancement of LLDP, known as LLDP-MED, that provides the following facilities:

Auto-discovery of LAN policies (such as VLAN, Layer 2 Priority and Differentiated services settings) enabling plug and play networking. Device location discovery to allow creation of location databases and, in the case of Voice over Internet Protocol (VoIP), Enhanced 911 services. Extended and automated power management of Power over Ethernet (PoE) end points.
