QUESTION 1

Which statement is true concerning spanning tree protocols and HP switches?

- A. ProVision switches use non-standard default cost values
- B. Comware switches have spanning tree enabled, by default
- C. ProVision switches, by default, auto-sense edge ports
- D. Comware switches use their serial number as the switch identifier in the bridge ID

Correct Answer: C

QUESTION 2

What is the default payload size for an 802.3 Ethernet frame on HP switches?

- A. 1500 bytes
- B. 1518 bytes
- C. 1522 bytes
- D. 9022 bytes

Correct Answer: A

QUESTION 3

Which methods can a network administrator use to upgrade the operating system of an HP ProVision switch? (Select two)

- A. SCP
- B. SFTP
- C. SNMP
- D. USB
- E. FTP

Correct Answer: BD

QUESTION 4

A network administrator has a network of HP ProVision switches with operator and manager passwords configured. The network administrator uses the copy config startup-config tftp pc command on each switch to save all the switch configuration to a TFTP server. The network administrator copies the configuration from one HP ProVision 3800 switch to an identical HP ProVision 3800 switch. The new switch no longer prompts for an operator or manager passwords.

What is the cause of this problem?

- A. The passwords must be saved by using a separate TFTP transfer with the copy passwords tftp pc command.
- B. The passwords cannot be restored they contain special characters misunderstood by the TFTP server.
- C. The passwords cannot be restored by default, to the startup-config file on the switch when executing the write memory command.

Correct Answer: C

QUESTION 5

Which STP protection feature does HP recommend against rogue switches?

- A. Root Protection should be enabled on access layer switches.
- B. BPDU Protection should be enabled on edge ports and uplink ports.
- C. Root Protection should be enabled on access and aggregation layer switches.
- D. BPDU Protection should be enabled on edge ports.

Correct Answer: D

We want to enable BPDU protection on any "edge ports", or ports that are connected to end user devices (PCs, printers, etc.) -- any device that should not be sending out STP BPDUs. Without BPDU protection, a malicious (or ignorant) user could plug a switch into our network and alter the spanning tree topology.
