QUESTION 1

What is available on the Jobs chart in the Management Console? (Select two)

- A. loading status and errors
- B. resource pool usage
- C. memory usage
- D. recovery progress and errors
- E. query performance

Correct Answer: AD

QUESTION 2

If your CEO runs a query each day, how can you be assured necessary resources will be available when the query is run? (Select two.)

- A. Create a resource pool with dedicated resources for the CEO.
- B. Move all other users out of the general pool, leaving the CEO as the only user in the general pool.
- C. Reserve one core for use by the CEO user only.
- D. Assign the CEO user to the general resource pool with a high MEMORYCAP.
- E. Profile the query to determine estimated resource usage.

Correct Answer: AE

QUESTION 3

What is a difference between maxconcurrency and plannedconcurrency?

- A. Maxconcurrency is a hard limit to the number of queries running within a pool; plannedconcurrency is used to create a query budget.
- B. Maxconcurrency is used to create a query budget; plannedconcurrency is a hard limit to the number of queries running within a pool.
- C. Maxconcurrency is a hard limit to the number of queries running within a pool; plannedconcurrency limits the number of queries running on the cluster.
- D. Maxconcurrency limits the number of queries running on the cluster; plannedconcurrency is a hard limit to the number of queries running within a pool.

Correct Answer: C

QUESTION 4

What is the purpose of Vertica's transaction model? (Select three.)

- A. Transactions mean that undo logs are not needed.
- B. Transactions are used to maintain partitions.
- C. Transactions are only written upon an explicit commit being issued.
- D. Transactions are used for data recovery.
- E. Transactions are used to delete data.
- F. Transactions are used to maintain segmentation.

Correct Answer: AC

QUESTION 5

What is the process for online recovery of a failed node? (Select two.)

- A. The recovered node gathers the necessary files from nodes with its buddy projections.
- B. The recovered node verifies that it is current once a recovery cycle completes.
- C. The recovered node uses spread to speed up the recovery process.
- D. The recovered node restores all files from the last backup.
- E. The recovered node must be rebuilt from epoch 0.

Correct Answer: BD
