QUESTION 1

When Centralized Access Control is configured as Automatic, when is a user data tunnel created?

- A. when more than one controller is on the network that has the same access control configuration
- B. when tunnels are manually configured and available
- C. when IPSec is set up between two controllers
- D. when a synchronized AP and its controller are on different subnets

Correct Answer: D

QUESTION 2

A company is deploying an HP MSM760 Controller that will control approximately 80 HP MSM APs. The HP MSM solution will provide wireless guest services and a WLAN for employees, which is secured with WPA2 and 802.1X.

The controller will perform the following functions: Handle all guest traffic

Provide DHCP services for guest clients

Force guests to log in through a web page and implement access controls

How should the network administrator connect the controller to the corporate LAN?

- A. The administrator must connect both the LAN port and the Internet port, and the ports must be in different VLANs.
- B. The administrator can connect either the LAN port or the Internet port, or both ports, but it is typically recommended to connect the Internet port.
- C. The administrator must connect both the LAN port and the Internet port, and the ports must be in the same VLAN.
- D. The administrator must connect only the LAN port.

Correct Answer: D

QUESTION 3

Which process matches VSCs with Groups?

- A. Binding
- B. Synchronizing
- C. Batching
- D. Grouping

Correct Answer: A

QUESTION 4

Match each description to the appropriate extensible authentication protocol (EAP) type.

Hot Area:

It uses a secure tunnel to protect both the client's username and its password

	▼
eap-peap	
eapttls	
eaptls	

Often used with windows supplicants it uses a secure tunnel to transmit the client's password

	▼
eap-peap	
eapttls	
eaptls	

It authenticates both the client and server with public key infrastructure(PKI) digital certificates

	▼
eap-peap	
eapttls	
eaptls	

Hot Area:

It uses a secure tunnel to protect both the client's username and its password

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

Often used with windows supplicants it uses a secure tunnel to transmit the client's password

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

It authenticates both the client and server with public key infrastructure(PKI) digital certificates

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

Correct Answer:

It uses a secure tunnel to protect both the client's username and its password

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

Often used with windows supplicants it uses a secure tunnel to transmit the client's password

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

It authenticates both the client and server with public key infrastructure(PKI) digital certificates

<input type="button" value="v"/>
eap-peap
eap-tls
eap-tls

QUESTION 5

Which feature differentiates the default VSC from other VSCs that are configured on an MSM Controller?

- A. Traffic from the default VSC is always routed out the Internet port.
- B. The default VSC can be used to control untagged wired traffic that is received on the LAN port.
- C. The default VSC must always be access controlled.
- D. Wireless clients that fail authentication to another VSC are assigned to this VSC.

Correct Answer: B
