QUESTION 1

What is an advantage of the HP IMC Wireless Service Manager (WSM)?

- A. An organization can centrally configure WLAN deployments of up to 10,000 FIT access points.
- B. An organization can centrally manage WLAN deployments of up to 5,000 FIT access points.
- C. An organization can configure switches, routers, and access controllers from a central location.
- D. An organization can manage guest access through the command line interface.

Correct Answer: C

QUESTION 2

An HP BYOD solution is deployed on a wireless infrastructure. Which components actively participate in the RADIUS authentication process of a user endpoint? (Select two)

- A. HP APs associated with an HP Unified Wireless controller in its default setup
- B. HP Wireless Service Manager (WSM)
- C. HP 830 Switch
- D. HP User Access Manager
- E. HP 830 Access Controller

Correct Answer: AD

QUESTION 3

A customer has an HP BYOD solution based on an HP 830 Unified Wired-Wireless Controller and HP 425 Access Points (APs). To ease the controller adoption of the APs, a VLAN is set up on the corporate LAN. How should this VLAN be configured?

- A. Set the VLAN on the switches between the APs and Comware L3 switch
- B. Set the VLAN as VLAN 1
- C. Set the VLAN on the switches between the APs and 830 wireless controller
- D. Set the VLAN on the switches between the APs and the 830 switch

Correct Answer: A

QUESTION 4

Refer to the exhibit.

Roam Group

Service:

IP Type: Source Address:

Auth Mode: Auth Key: (1-16 character)

Member List

IP Address: VLAN: (2-4094, Example: 3, 5-10)

Add

What does the Auth Mode enable?

- A. sets the authentication mechanism(s) that must be used by clients if they wish to roam between access controllers
- B. adds message integrity checks to messages sent between access controllers in the roaming group
- C. ensures that all traffic between access controllers is encrypted
- D. ensures access controllers are authenticated before they join the roaming group

Correct Answer: B

QUESTION 5

An administrator wants to configure authentication on the HP 830 switch ports that connect to wireless access points. The company policy requires all wireless users to be authenticated using 802.1X authentication. Each port should also allow multiple wireless users to pass 802.1X authentication.

Which port security mode meets these requirements?

- A. macAddressWithRadius
- B. userLoginSecure
- C. userLoginSecureExt
- D. macAddressElseUserLoginSecureExt

Correct Answer: D

An engineer is installing a new access point (AP). The AP has successfully acquired an IP address. The engineer can ping the access controller (AC) from the AP. However the AC is not discovering the AP. What could cause this problem?

- A. The interface between the AC and the IP network is down.
- B. The AC and AP must be in the same subnetwork.
- C. The AP and AC are not in the same VLAN.
- D. The DHCP server has not been set up with option 43.
