QUESTION 1

A client device associates with an SSID provisioned with 802.1X authentication. The client is set for PEAP authentication. EAP termination (AAA Fastconnect) is disabled on the controller. But the client continuously cycles through the authentication process. Which of the following could cause this? (Choose two)

- A. The client is provisioned with the wrong EAP type.
- B. The client has an expired or revoked server certificate.
- C. The DHCP server is not enabled.
- D. The VLAN is missing for the SSID.
- E. The controller does not support PEAP in this mode.

Correct Answer: AB

QUESTION 2

An administrator works in an Aruba-based network which has a master controller and three local controllers, Centralized licensing is not in use. The administrator notices that no Aps terminate on the master controller and concludes that the roles and firewall policies need to be created and applied.

Which statement is true about the administrator's conclusion?

- A. A PEFNG license does not need to be installed on the controller since PEFNG is part of base OS.
- B. A PEFNG license should be installed on the master and all three local controllers.
- C. A PEFNG license should be installed on only the master controller, since that is where role and firewall policies are created.
- D. A PEFNG license should be installed on only the local controllers, since that is where firewall policies are applied.

Correct Answer: B

QUESTION 3

What additional fields must be configured in the configuration wizard if the controller role is selected as a local instead of a standalone controller?

- A. The Local's SNMPv3 user name and password
- B. The Master IP address
- C. The Local's loopback address
- D. The IPSec PSK for Master/Local communication

Correct Answer: BD

QUESTION 4

An administrator creates a WLAN in which non-registered users will be assigned the captive portal policy. Which role should these users be placed in?

- A. logon
- B. AP-Role
- C. guest-logon
- D. default-logon

Correct Answer: A

QUESTION 5

```
ip access-list session anewone user network 10.1.1.0 255.255.255.0 any permit user host 10.1.1.1 any deny
```

user any any permit Referring to the above portion of a Mobility Controller configuration file, what can you conclude? (Choose two)

- A. This is a session firewall policy.
- B. This is an extended Access Control List (ACL).
- C. Any traffic going to destination 10.1.1.1 will be denied.
- D. Any traffic going to destination 10.2.2.2 will be denied.
- E. Any traffic going to destination 172.16.100.100 will be permitted.

Correct Answer: AE
