## QUESTION 1

Which two requirements should the Salesforce Community Cloud support for self-registration and SSO? Choose 2 answers

- A. SAML SSO and Registration Handler
- B. OpenId Connect Authentication Provider and Registration Handler
- C. SAML SSO and just-in-time provisioning
- D. OpenId Connect Authentication Provider and just-in-time provisioning

Correct Answer: BC

---

## QUESTION 2

Universal Containers has a SOAP-based integration that runs nightly to update the Product(Product2) object in Salesforce with updated product availability for over 500,000 products. The source system is a green-screen ERP that must be taken offline to produce nightly production reports, such as the inventory availability report used for this integration. The integration is performing very slowly and does not complete within the allocated four-hour time slot.

What three recommendations might a Technical Architect make to resolve this issue?

Choose 3 answers

- A. Use outbound Messaging to notify Salesforce promptly when product availability changes in the source system.
- B. Store the Salesforce Product ID in the source system to eliminate the need for External IDs and UPSERT API calls.
- C. Pre-process the data to avoid the need for workflow rules or triggers
- D. Use the Bulk API UPDATE or UPSERT records more efficiently.
- E. Contact Salesforce support to request that they turn off record locking on the Product2 object.

Correct Answer: BCD

---

## QUESTION 3

Northern Trail Outfitters submits orders to the manufacturing system web-service. Recently, the system has experienced outages that keep service unavailable for several days.

What solution should an architect recommend to handle errors during these types of service outages?

- A. Use middleware queuing and buffering to insulate Salesforce from system outages.
- B. A Use Platform Event replayId and custom scheduled Apex process to retrieve missed events.
- C. Use @future jobId and custom scheduled apex process to retry failed service calls.

D. Use Outbound Messaging to automatically retry failed service calls.

Correct Answer: A

---

## QUESTION 4

Universal Containers is using the enterprise WSDL to integrate their financial system to salesforce, while reading y=the release notes for the upcoming salesforce release the architect discovers a new object will be added to the salesforce data model that would be beneficial for the financial system integration.

What two actions should the architect take to ensure the new object will be available to the financial system integration? Choose 2 answers

- A. Download the latest enterprise WSDL that contains the new object definition to generate Web service stubs for the new Salesforce object.
- B. Download the latest partner WSDL that contains the new object definition to generate web services stubs for the new salesforce object
- C. Migrate to the partner WSDL to generate a generic sObject service stub that can be leveraged for existing and future Salesforce objects
- D. Migrate to the metadata API to download the new salesforce sObject definition into the financial system integration.

Correct Answer: AD

---

## QUESTION 5

Universal Containers wants to gather information from a third-party application to update shipping information for an order inside Salesforce. A salesperson could trigger an update and the user interface would refresh with the current status.

Which are two recommended options for this when utilizing a Remote Process Invocation-Request and Reply pattern?

- A. A batch Apex job that performs an Apex SOAD or HTTP callout in a synchronous manner.
- B. A custom Visualforce page or button that initiates an Apex REST callout in a synchronous manner.
- C. A custom Visualforce page or button that initiates an Apex SOAP callout in a synchronous manner.
- D. A trigger that's invoked from Salesforce Data changes, performs and Apex SOAP in a synchronous manner

Correct Answer: BC
