-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Which of the following is a common physical network topology?

- A. Cross-over
- B. Loopback
- C. Star
- D. Straight

Correct Answer: C

Explanation: A star network consists of one central switch, hub or computer, which acts as a conduit to transmit messages. This consists of a central node, to which all other nodes are connected; this central node provides a common connection point for all nodes through a hub. In star topology, every node (computer workstation or any other peripheral) is connected to central node called hub or switch.

---

### QUESTION 2

Which of the following defines the amount of time a host retains a specific IP address before it is renewed or released?

- A. DHCP lease
- B. DNS suffix
- C. Subnet mask
- D. DHCP reservation

Correct Answer: A

By default, each IP address assigned by a DHCP Server comes with a one-day lease, which is the amount of time that the address is valid.

---

### QUESTION 3

Which of the following is the control when observing network bandwidth patterns over time?

- A. Network log
- B. Baseline
- C. Flow data
- D. Interface statistics

Correct Answer: B

To successfully baseline a network it is important to consider two functions; performance at protocol level and

performance at application level. There are many significant metrics to consider at the protocol level, but only a few which are critical. The most important is bandwidth utilization compared with bandwidth availability. The most likely cause of poor network performance is insufficient bandwidth. Trending bandwidth utilization allows you to recognize problem areas, provide enough bandwidth to reach performance objectives, and predict future capacity requirements. Changes in bandwidth utilization patterns also provide a clear indication of network usage alterations, such as a change in end-user behavior, or the unauthorized addition of an application.

---

#### QUESTION 4

Several users from the finance department report that they are able to access the Internet, but unable to connect to their financial applications. The network technician is unable to ping the finance server. The technician decides to check the switch and determines that Internet access is working. Which of the following is a possible cause of the access issues?

- A. Faulty cable
- B. Remote management disabled
- C. Improper VLAN assignment
- D. Mismatched duplex

Correct Answer: C

Explanation: Finance Server is placed in same VLAN which is assigned to finance users if they are able to access internet that means connectivity to switch is good, so we have to check the VLAN assigned to users.

---

#### QUESTION 5

A company wants to ensure that a wireless signal from their WAP only sends down one specific corridor. Which of the following can be done to achieve this?

- A. Disable the SSID.
- B. Change the broadcast channel.
- C. Lower the signal strength.
- D. Change the antennas.

Correct Answer: D
