QUESTION 1

You are required to design a university network to meet the conditions shown below.

Users connected to the university network should be able to access the Internet and the research department lab network.

The research department lab network should not be able to reach the Internet.

Which three actions satisfy the design requirements? (Choose three.)

- A. Use a global permit policy for Internet traffic
- B. Use a global deny security policy for the research lab
- C. Use separate security zones for each department
- D. Use the default deny security policy for the research lab
- E. Use a static NAT rule between the internal zones for the research lab

Correct Answer: ACD

QUESTION 2

Click the Exhibit button.

You are designing the virtualized server deployment shown in the exhibit in your data center. The vSRX device is acting as a Layer 2 firewall and the two VMs must communicate through the vSRX device.

Which two actions must you perform to accomplish this task? (Choose two.)

- A. Place both VMs in the same vSwitch
- B. Place both VMs in the same VLAN
- C. Place both VMs in different vSwitches
- D. Place both VMs in different VLANs

Correct Answer: BC

QUESTION 3

You work for an ISP that wants to implement remote-triggered black hole (RTBH) filters. What are three considerations in this scenario? (Choose three.)

- A. Source RTBH can block legitimate traffic on the network
- B. BGP FlowSpec improves the RTBH model by implementing dynamic firewall filters
- C. Source RTBH requires uRPF to be implemented on the service provider's network core
- D. Destination RTBH requires uRPF to be implemented on the service provider's network edge

E. Destination RTBH essentially completes the attack on the victim's IP

Correct Answer: ABC

QUESTION 4

Policy Enforcer provides which benefit?

- A. log management
- B. command and control protection
- C. centralized management of security devices
- D. IPsec encryption

Correct Answer: C

QUESTION 5

You are designing a data center interconnect between two sites across a service provider Layer 3 VPN service. The sites require Layer 2 connectivity between hosts, and the connection must be secure.

In this scenario, what will accomplish this task?

- A. EVPN over IPsec
- B. MACsec encryption
- C. SSL VPN encryption
- D. stacked VLAN tagging

Correct Answer: B
