Following Questions and Answers are all new published by Juniper Official Exam Center

QUESTION 1

Which statement is true regarding proxy ARP?

A. Proxy ARP is enabled by default on stand-alone JUNOS security devices.

B. Proxy ARP is enabled by default on chassis clusters.

C. JUNOS security devices can forward ARP requests to a remote device when proxy ARP is enabled.

D. JUNOS security devices can reply to ARP requests intended for a remote device when proxy ARP is enabled.

Correct Answer: D

QUESTION 2

Which two actions occur during IKE Phase 1? (Choose two.)

A. A secure channel is established between two peers.

B. The proxy ID is used to identify which security association is referenced for the VPN.

C. The Diffie-Hellman key exchange algorithm establishes a shared key for encryption.

D. The security association is identified by a unique security parameter index value.

Correct Answer: AC

QUESTION 3

You want to silently drop HTTP traffic.

Which action will accomplish this task?

A. [edit security policies from-zone untrust to-zone trust policy drop-http] user@host# show match { source-address any; destination-address any; application junos-http; } then { deny; }

B. [edit security policies from-zone untrust to-zone trust policy drop-http] user@host# show match { source-address any; destination-address any; application junos-http; } then { reject; }

C. [edit security policies from-zone untrust to-zone trust policy drop-http] user@host# show match { source-address any; destination-address any; application junos-http; } then { block; }

D. [edit security policies from-zone untrust to-zone trust policy drop-http] user@host# show match { source-address any; destination-address any; application junos-http; } then { terminate; }

Correct Answer: A

QUESTION 4

Which two statements are true regarding firewall user authentication? (Choose two.)

A. When configured for pass-through firewall user authentication, the user must first open a connection to the Junos security platform before connecting to a remote network resource.

B. When configured for Web firewall user authentication only, the user must first open a connection to the Junos security platform before connecting to a remote network resource.

C. If a Junos security device is configured for pass-through firewall user authentication, new sessions are automatically intercepted to perform authentication.

D. If a Junos security device is configured for Web firewall user authentication, new sessions are automatically intercepted to perform authentication.

Correct Answer: BC

QUESTION 5

Which two statements are true for an active/active high availability configuration? (Choose two.)

A. All configured interfaces are active on each node and processing traffic.

B. The Routing Engines on the nodes work in a master/backup scenario and the master will determine which of the nodes the traffic will egress.

C. The Routing Engines on both nodes are processing their own sessions and will send traffic managed by the other Routing Engine to that node through the data link.

D. Interfaces work in an active/passive fashion and sessions are processed accordingly.

Correct Answer: AC
