### QUESTION 1

You have been asked to provision a service provider's network to accommodate Layer 3 VPNs as defined in RFC 4364.

Which three tasks must be performed before the provider core is ready to carry VPN traffic? (Choose three.)

- A. All P routers and PE routers must be configured to support MPLS administrative-groups (colors)
- B. All PE routers must be configured to support Multiprotocol BGP (MP-BGP)
- C. All P routers and PE routers must have a signaling protocol such as RSVP or LDP enabled
- D. All P routers and PE routers must have a discovery protocol such as LLDP or CDP enabled
- E. All P routers and PE routers must have MPLS reach ability to PE routers

Correct Answer: BCE

---

### QUESTION 2

You are using RSVP to signal an MPLS LSP. Which statement is true in this scenario?

- A. LSPs can be configured without any traffic engineering constraints.
- B. The traffic engineering database must be used for all LSPs.
- C. A primary path must be configured to establish an LSP.
- D. A secondary path must be configured to establish an LSP.

Correct Answer: A

---

### QUESTION 3

Which two statements are correct about a generated route? (Choose two.)

- A. A generated route requires at least two contributing active routes to be active.
- B. A generated route has a route preference of 150.
- C. The primary contributing route is the route with the lowest preference that falls within the aggregate range of prefixes.
- D. A generated route receives the next hop for the primary contributing route.

Correct Answer: CD

---

### QUESTION 4

You want to influence how traffic enters your network.

Using industry best practices, which two BGP attributes would you modify to accomplish this goal? (Choose two)

- A. AS Path
- B. Local Preference
- C. Next Hop
- D. MED

Correct Answer: AD

---

#### QUESTION 5

Which two statements are true about the BGP MED attribute? (Choose two.)

- A. It has a default value of 100
- B. It has an assumed value of 0
- C. It is designed for use when multiple connections exist between the same two autonomous systems
- D. It is designed for use when a BGP router is peering with at least two different autonomous systems

Correct Answer: BC

MED is used to help influence the preferred path back into the autonomous system when multiple links exist between the same two autonomous systems. BGP routes do not require the MED attribute. If it is missing, BGP assumes the MED value is 0.
