100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Juniper  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Which two BGP attributes influence traffic coming into an AS? (Choose two.)

- A. local preference
- B. next hop
- C. MED
- D. origin

Correct Answer: AB

A: The LOCAL\_PREF attribute is a well-known attribute that represents the network operator's degree of preference for a route within the entire AS. The larger the value of the local preference, the more preferable the route is.

B: The BGP NEXT\_HOP is a well-known mandatory attribute. The Next Hop attribute is set when a BGP speaker advertises a prefix to a BGP speaker outside its local autonomous system (it may also be set when advertising routes within an AS, this will be discussed in later sections). The Next Hop attribute may also serve as a way to direct traffic to another speaker, rather than the speaker advertising the route itself

### QUESTION 2

R0 is a Juniper Networks MX router with dual Routing Engines. You must load new software on R0 while ensuring no control plane disruption and minimal data loss.

Which three features meet the requirement? (Choose three.)

- A. graceful restart
- B. NSR
- C. graceful Routing-Engine switchover (GRES)
- D. unified ISSU
- E. BFD

Correct Answer: BCD

---

### QUESTION 3

Which two problems occur when increasing numbers of users are added to traditional hub-based Ethernet LAN? (Choose two.)

- A. There is a greater chance for collisions to occur
- B. The MAC table sizes increase

- C. Some devices will not see certain traffic
- D. There is unnecessary consumption of network bandwidth

Correct Answer: AD

As nodes are added to a shared Ethernet LAN, the likelihood of collisions increases, which in turn consumes more network bandwidth, adversely effecting performance.

---

#### QUESTION 4

What are two ways that nonstop routing works? (Choose two.)

- A. by enabling redundant REs to switch from primary RE to backup RE
- B. by alerting peer nodes of any routing table changes
- C. by enabling redundant REs to run a different version of the Junos OS
- D. by replicating routing protocol information

Correct Answer: AD

---

#### QUESTION 5

Which statement correctly describes unified in-service software upgrades (ISSU)?

- A. Unified ISSU is built upon graceful-restart extensions to allow upgrades with no impact to the data plane.
- B. Unified ISSU is supported on systems with single or dual Routing Engines.
- C. Unified ISSU permits both upgrades and downgrades with no control plane disruption and is based on the graceful Routing Engine switchover (GRES) feature.
- D. Unified ISSU is based on nonstop-routing (NSR) and graceful Routing Engine switchover (GRES), and permits software upgrades only.

Correct Answer: D
