-  **800,000+** Satisfied Customers

QUESTION 1

You administer your company's network. The network consists of a single Active Directory domain. All servers run Windows Server. The network contains a two-node server cluster. The company's security expert informs you that the password on the domain user account that is used for the Cluster service has been compromised and must be changed immediately. Your actions should cause minimal or no disruption of the services provided by the cluster because the cluster is running a mission-critical application.

Which of the following should you do?

- A. Use Active Directory Users and Computers to reset the password.
- B. Use the Services console to change the password on any one of the cluster nodes.
- C. Use the Cluster command with the appropriate options.
- D. Use the dsmod user command with the appropriate options.
- E. Use the dsmod computer command with the appropriate options.

Correct Answer: C

QUESTION 2

You are a network administrator for your Windows Server domain and you are updating the network configuration for your company. You have used part of the 191.99.74.0/16 IP address range that your company owns and segmented the

networks in this new location in such a way to allow for 60 hosts per subnet currently and also allow for an anticipated growth of 15% for the client systems.

Your design also calls for adding a routing configuration that will allow you to forward IP multicast traffic and the use of the Internet Group Management Protocol (IGMP). You have decided to use the Routing and Remote Access Service on your Windows Server system to handle this requirement in your environment. You also need to define the standards for your network nodes with regard to multicasting on your network.

What is a specific characteristic that is required of a host or network node that is multicast-capable?

Select the best answer.

- A. The network node must be able to use a multicast routing protocol to propagate multicast group listening information to other multicast-capable nodes.
- B. The network node must be able to listen for all multicast traffic on all attached networks. Upon receiving multicast traffic the node would have to forward the multicast packet to attached networks where other nodes are listening or where downstream routers have nodes that are listening.
- C. The network node must be able to listen for IGMP membership report messages and update the TCP/IP multicast forwarding table.

D. The network node must be able to register the multicast addresses being listened to by the node with local routers so that multicast packets can be forwarded to the network of the node.

Correct Answer: D

QUESTION 3

The ABC.com network consists of a single Active Directory domain named ABC.com. All the servers on the network run Windows Server servers.

The network contains a file server named ABC-SR24. ABC-SR24 hosts shared folders for users in the Sales department.

All shared folders are backed up using a Normal backup on a weekly basis over the weekend. An incremental backup of the shared folders is taken every night.

A Copy backup of the shared folders is taken every Thursday night after the incremental backup. On Friday morning, the Sales manager reports that he has accidentally deleted an important file. He asks you to restore the file as quickly as

possible. He doesn't know when the file was last modified.

From which backup tape or tapes should you restore the file?

- A. The last normal backup and the last incremental backup.
- B. The last normal backup and the incremental backups from Monday, Tuesday, Wednesday and Thursday.
- C. The last incremental backup.
- D. The last normal backup.
- E. The last Copy backup.

Correct Answer: E

QUESTION 4

You are the administrator of a Windows Server network. You have five WINS servers and need to reconfigure the replication topology as a result of some recent uABCrades to your WAN links. All of your WAN links connecting the head office and your four branch offices now have ample bandwidth to handle additional traffic. You want to ensure the shortest convergence time of replicated records, while at the same time keep the number of replication partnership agreements to an absolute minimum. What replication topology should you choose? (Select the best answer.)

- A. Ring topology
- B. Mesh topology
- C. Hub-and-spoke topology
- D. Hybrid of ring and hub-and-spoke topology

Correct Answer: C

QUESTION 5

The ABC.com network consists of a single Active Directory domain named ABC.com.

You want to improve the security on the Windows Server domain controllers by configuring enhanced password policies and audit settings.

Which security template should you apply to the domain controllers?

- A. Setup security.inf.
- B. Hisecws.inf.
- C. DC security.inf.
- D. Securews.inf.
- E. Securedc.inf.
- F. Compatws.inf.
- G. Rootsec.inf.

Correct Answer: E
