QUESTION 1

You are working on a Magento store which will be selling in two countries. Each country has its own set of payment methods.

How do you organize the project to support this requirement?

- A. Create one website, two payment scopes
- B. Create one website, one store view
- C. Create one website, two store views
- D. Create two websites, two store views

Correct Answer: A

QUESTION 2

A merchant is interested in setting different prices for the same products in different store scopes. What do you reply to this inquiry?

- A. The prices can only be scoped per website or globally
- B. The prices can be scoped per store
- C. The price scope can be set to store but this will lead to performance degradation of category pages
- D. The prices do not support scopes

Correct Answer: A

QUESTION 3

You are adding a child node to the product.info block using the XML:

```
<referenceBlock name="product.info">
  <block class="MyCompany\MyModule\Block\Custom"
    name="myblock"
    as="mynewblock"
    template="custom.phtml"/>
</referenceBlock>
```

How will this block be rendered?

- A. Child block nodes are automatically rendered as HTML
- B. By calling `$block->getChildHtml('mynewblock')` in the parent block's template
- C. The layout is invalid since block elements cannot be nested
- D. Automatically if the block class `Custom` implements the `_toHtml` method

Correct Answer: B

QUESTION 4

Products may be accessed using SEO friendly URLs like `/my-product` instead of `/catalog/product/view/id/{ID}`

How is this one?

- A. An event observer adds `RewriteRules` to `.htaccess` on product save
- B. `Magento\Catalog\Controller\Product\View::loadByUrlKey` loads product pages using the `url_key` attribute value
- C. Using a URL Rewrite stored in the database connecting the request path with the target path
- D. A plugin on `Magento\UrlRewrite\Controller\Router::match` loads products by the `url_key` attribute

Correct Answer: C

QUESTION 5

What is the connection between product attribute sets and categories?

- A. Categories have no connection to product attribute sets, and any product can be assigned to any category
- B. Each category is linked to a single product attribute set, and only products from that attribute set are allowed in the category
- C. Each category is linked to a single product attribute set, and only products from that category's set or any of its parent categories
- D. Categories can be connected to multiple product attribute sets, and only products from one of those sets are allowed in the category

Correct Answer: D
