QUESTION 1

A financial services company uses the Common Data Service (CDS) to develop solutions. The company uses development and production instances.

You need to move solutions from the development instance to the production instance.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Export all managed solutions from the development instance and import the solutions into the production instance.
- B. In the development instance, make changes to the solutions that are deployed in the production instance, export the solutions as managed solutions, and import the managed solutions into the production instance.
- C. In the production instance, import solutions with the same version number or higher when updating solutions.
- D. In the development instance, highlight the solution you want to make changes to, select Clone a Path, make changes, export the solution, and import the solution into the production instance.

Correct Answer: CD

Reference: <https://docs.microsoft.com/en-us/power-platform/admin/wp-solution-packages>

QUESTION 2

DRAG DROP

A company is creating a new system based on Common Data Service.

You need to select the features that meet the company's requirements.

Which options should you use? To answer, drag the appropriate options to the correct requirements. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Options

-
-
-
-

Answer Area

Requirement	Option
Visualize records as a hierarchy in a model-driven app.	<input type="text" value="Option"/>
Associate a record with other records in multiple entities.	<input type="text" value="Option"/>
Records in one entity must be able to reference only a single record in another entity.	<input type="text" value="Option"/>
Any record in one entity must be able to be referenced by any record in another entity.	<input type="text" value="Option"/>

Correct Answer:

Options

-
-
-
-

Answer Area

Requirement	Option
Visualize records as a hierarchy in a model-driven app.	<input type="text" value="self-referential relationship"/>
Associate a record with other records in multiple entities.	<input type="text" value="connection"/>
Records in one entity must be able to reference only a single record in another entity.	<input type="text" value="one-to-many relationship"/>
Any record in one entity must be able to be referenced by any record in another entity.	<input type="text" value="many-to-many relationship"/>

Box 1: self-referential relationship

Box 2: connection There are other less formal kinds of relationships between records that are called connections. For example, it may be useful to know if two contacts are married, or perhaps they are friends outside of work, or perhaps a contact used to work for another account. Most businesses won't generate reports using this kind of information or require that it is entered, so it's probably not worthwhile to create entity relationships.

Box 3: one-to-many relationship Box 4: many-to-many relationship

Reference: <https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-entity-relationships>

QUESTION 3

HOTSPOT

You are developing a Web API for a company.

You need to implement the appropriate operations to meet the company's requirements.

What should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Operation

Implement operations that do not have side effects and may support further composition

▼
Functions
Actions
Entities

Implement operations that allow side effects, such as data modification

▼
Functions
Actions
Entities

Implement keyless named structured types that consist of a set of properties

▼
Complex types
Entity types
Enumeration types

Correct Answer:

Answer Area

Requirement

Implement operations that do not have side effects and may support further composition

Implement operations that allow side effects, such as data modification

Implement keyless named structured types that consist of a set of properties

Operation

Functions
Actions
Entities

Functions
Actions
Entities

Complex types
Entity types
Enumeration types

Box 1: Functions Box 2: Actions Box 3: Complex types

Complex types are keyless named structured types consisting of a set of properties. Complex types are commonly used as property values in model entities, or as parameters or return values for operations.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/common-data-service/webapi/web-api-types-operations#complex-types>

QUESTION 4

HOTSPOT

A manufacturing company takes online orders.

The company requires validation of order changes. Requirements are as follows:

1.

If validation is successful, the order is submitted.

2.

If exceptions are encountered, a message must be shown to the customer.

You need to set up and deploy a plug-in that encapsulates the rules.

Which options should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Settings	Options
Execution stage	<div style="border: 1px solid black; padding: 2px;"><div style="background-color: #f0f0f0; padding: 2px; margin-bottom: 2px;">▼</div><div style="padding: 2px;">PreValidation</div><div style="padding: 2px;">PreOperation</div><div style="padding: 2px;">PostOperation</div></div>
Execution mode	<div style="border: 1px solid black; padding: 2px;"><div style="background-color: #f0f0f0; padding: 2px; margin-bottom: 2px;">▼</div><div style="padding: 2px;">Asynchronous</div><div style="padding: 2px;">Synchronous</div></div>
Image	<div style="border: 1px solid black; padding: 2px;"><div style="background-color: #f0f0f0; padding: 2px; margin-bottom: 2px;">▼</div><div style="padding: 2px;">Pre image</div><div style="padding: 2px;">Post image</div></div>
Error message	<div style="border: 1px solid black; padding: 2px;"><div style="background-color: #f0f0f0; padding: 2px; margin-bottom: 2px;">▼</div><div style="padding: 2px;"><pre>throw new InvalidPluginExecutionException("Your error message", ex); tracingService.Trace("Your error message: {0}", ex.ToString());</pre></div></div>

Correct Answer:

Answer Area

Settings

Options

Execution stage

PreValidation
PreOperation
PostOperation

Execution mode

Asynchronous
Synchronous

Image

Pre image
Post image

Error message

```
throw new InvalidPluginExecutionException("Your error message", ex);  
tracingService.Trace("Your error message: {0}", ex.ToString());
```

Box 1: PreValidation

PreValidation

Pre-event/Pre-Validation

This stage executes before anything else, even before basic validation if the triggering action is even allowed based on security. Therefore, it would be possible to trigger the plug-in code even without actually having permission to do so and

great consideration must be used when writing a pre-validation plug-in. Also, execution in this stage might not be part of the database transaction.

Examples:- security checks being performed to verify the calling or logged on user has the correct permissions to perform the intended operation.

Note: Ideally, you should only cancel operations using synchronous plug-ins registered in the PreValidation stage. This stage usually occurs outside the main database transaction. Cancelling an operation before it reaches the transaction is

highly desirable because the cancelled operation has to be rolled back.

Box 2: Synchronous

When you throw an `InvalidPluginExecutionException` exception within a synchronous plug-in an error dialog with your message will be displayed to the user.

Box 3: Pre Image

When are the different images available in the event execution pipeline?

Message	Stage	Pre-Image	Post-Image
Create	PRE	No	No
Create	POST	No	Yes
Update	PRE	Yes	No
Update	POST	Yes	Yes
Delete	PRE	Yes	No
Delete	POST	Yes	No

Box 4: `Throw new InvalidPluginExecutionException("Your error message", ex);`

When you throw an `InvalidPluginExecutionException` exception within a synchronous plug-in an error dialog with your message will be displayed to the user.

QUESTION 5

You need to modify Microsoft Flow to resolve CustomerC\'s issue. What should you do?

- A. Add a condition containing approval hierarchy.
- B. Add a timeout setting to the approval flow.
- C. Add a configure run that is set to is successful.
- D. Add a data operation that specifies the false conditions.

Correct Answer: B

Scenario: CustomerC requested additional information from the parts department through the customer survey and has not received a response one week later.

Imagine having a process where you want to give someone a couple of days to reply to an approval. If that someone doesn't respond in time, you want to assign a new approval to another person or group of people. To achieve this you can set the timeout in the action settings.
