QUESTION 1

You have a Dynamics AX development environment. You need to delete the data in a specific table manually. What should you use?

- A. The Type hierarchy browser
- B. The Delete Actions of the table
- C. The Code profiler
- D. The Table Browser

Correct Answer: D

After you have created a forms interface and entered data in a table, you can use the table browser to view and edit data. Reference: Use the Table Browser to View, Add, Modify, or Delete Records [AX 2012]

QUESTION 2

You need to explicitly request permission to invoke a secured class. Which two methods should you use? Each correct answer presents part of the solution.

- A. Set
- B. Define
- C. Assert
- D. Invoke
- E. Demand

Correct Answer: CE

Method assert: Declares that the calling code can invoke an API that is protected by a permission.

Method Demand: Checks the call stack to determine whether the permission that is required to invoke an API has been granted to the calling code.

Reference: ExecutePermission Class [AX 2012]

QUESTION 3

You have the following X++ statement:

```
Int variableA, variableB;  
Int _parameter = 3;  
  
Try  
{  
    while(variableA < _parameter)  
    {  
        if(variableA == 1)  
        {  
            break;  
        }  
        else if(variableA > 2)  
        {  
            throw error("Variable2 cannot have value greater than 2.");  
        }  
        variableA++;  
    }  
    if(variableB < variableA)  
    {  
        error("Wrong value of variableB variable.");  
    }  
}  
  
Catch (Exception::Error)  
{  
    error("Process was aborted.");  
}  
  
Catch (Exception::Break)  
{  
    error("Process was cancelled.");  
}
```

- A. Wrong value of variable B variable.
- B. Wrong value of variable B variable. Process was cancelled.
- C. Variable2 cannot have value greater than 2. Process was aborted.
- D. Process was cancelled. Wrong value of variable B variable.

Correct Answer: A

All variables must be declared before they can be used. When a variable is declared, memory is also allocated and the variable is initialized to the default value. Variable b would be initialized to 0 by default.

Reference: Declaration of Variables [AX 2012]

QUESTION 4

You need to provide users with the ability to open a Microsoft SQL Server Reporting Services (SSRS) report from a form. What should you use?

- A. A data source
- B. A form part
- C. An output menu item

D. A display method

Correct Answer: B

Use the report servers form to connect a Microsoft Dynamics AX Application Object Server (AOS) instance to a Microsoft SQL Server Reporting Services instance.

Note: In Microsoft Dynamics AX, navigation to forms and reports is organized into modules. A module is a collection of forms, and reports that you use for a specified business activity.

Reference: Report servers (form) [AX 2012]

QUESTION 5

You have the following X++ statement:

```
int counter = 4;  
;  
do  
{  
    while(counter >= 3)  
    {  
        print strfmt("%1", 2);  
        break;  
    }  
    print strfmt("%1", counter);  
    counter--;  
}  
while(counter >= 3);  
Pause;
```

You need to identify the output of the statement. What should you identify?

- A. 2
- B. 4
- C. 2
- D. 2

Correct Answer: A
