QUESTION 1

Looking at the SOA records presented below, how long will the secondary server wait before it reattempts to synchronize with the primary server if it was not able to do so when it reached its refresh time of 2 days as presented in the SOA below?

- A. 15 minutes
- B. 10 minutes
- C. It will never retry and will wait another two days
- D. 900 minutes

Correct Answer: A

QUESTION 2

When a digital certificate has been revoked before its expiry date, how will the Certification Authority (CA) that issued the certificate inform other CAs that the specific certificate is no longer valid.

- A. By posting it on the CA web site
- B. By sending an email message to the other CAs
- C. By posting it on the certificate revocation list
- D. By posting it on the certificate expiry list

Correct Answer: C

QUESTION 3

Why is it so challenging to block packets from Remote Access Trojans that use port 80 for network communications? Choose three.

- A. To a firewall, the traffic appears simply to be from an internal user making an innocuous HTTP GET request.
- B. Port 80 outbound is normally open on corporate firewalls
- C. Stateful inspection firewalls will block unsolicited inbound HTTP GET requests
- D. Not all firewalls are capable of inspecting data in the HTTP data fields for evidence of tunneling

Correct Answer: ABD

QUESTION 4

Which of the following protocols usually make use of the UDP protocol while querying information and the TCP

protocol for some other functions?

- A. SMTP
- B. HTTP
- C. DNS
- D. TELNET

Correct Answer: C

QUESTION 5

Detailed logging is the enemy of all crackers.

After getting unauthorized access to a computer, a cracker will attempt to disable logging on the remote hosts that he compromises.

In order to do so there are a few tools that could be used.

Which of the following command lines would disable auditing on a Windows platform?

- A. auditpol/disable
- B. auditlog/disable
- C. auditpol/off
- D. auditlog/off

Correct Answer: A
