QUESTION 1

HOTSPOT

You have a Microsoft 365 E5 subscription that contains two groups named Group1 and Group2 and the users shown in the following table.

Name	Role	Member of
Admin1	Global Administrator	None
User1	Global reader	Group1
User2	Global reader	Group2

You have the Privileged Access settings configured as shown in the following exhibit.

Privileged Access

Privileged access provides a way for people in your organization to perform tasks that would otherwise require a higher level of permission or an admin role. When someone submits a request to access a privileged task, the default approval group you choose can approve or deny it.

After you choose the approval group, create policies to define the types of privileged tasks people can request access to.

☑ Allow privileged access requests and choose a default approval group

    G Group2

You have a privileged access policy that has the following settings:

1.

Policy name: New Transport Rule

2.

Policy type: Task

3.

Policy scope Exchange

4.

Approval Type: Manual

5.

Approver group: Group 1

User1 requests access to the New Transport Rule policy for a duration of two hours.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

	Yes	No
Admin1 can approve the request	○	○
User1 can approve the request	○	○
User2 can approve the request	○	○

Correct Answer:

	Yes	No
Admin1 can approve the request	○	●
User1 can approve the request	○	●
User2 can approve the request	○	●

N - If an approver is defined then Global/PIM admins can\\'t approve N - User cannot approver their own requests N - approver defined is user group1 and user 2 is in group2 so they can\\'t approve.

QUESTION 2

What should User6 use to meet the technical requirements?

A. Supervision in the Security and Compliance admin center

B. Service requests in the Microsoft 365 admin center

C. Security and privacy in the Microsoft 365 admin center

D. Data subject requests in the Security and Compliance admin center

Correct Answer: B

https://learn.microsoft.com/en-us/microsoft-365/compliance/customer-lockbox-requests?view=o365-worldwide

QUESTION 3

You have a Microsoft 365 subscription.

You have a Microsoft SharePoint Online site named Site1.

You have a Data Subject Request (DSR) case named Case1 that searches Site1.

You create a new sensitive information type.

You need to ensure that Case1 returns all the documents that contain the new sensitive information type.

What should you do?

A. From the Security and Compliance admin center, create a new Search by ID List.

B. From Site1, modify the search dictionary.

C. From the Security and Compliance admin center, create a new Guided search.

D. From Site1, initiate a re-indexing of Site1.

Correct Answer: C

https://learn.microsoft.com/en-us/compliance/regulatory/gdpr-dsr-office365#using-the-content-search-ediscovery-tool-to-respond-to-dsrs

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You have a user named User1. Several users have full access to the mailbox of User1.

Some email messages sent to User1 appear to have been read and deleted before the user viewed them.

When you search the audit log in Security and Compliance to identify who signed in to the mailbox of User1, the results are blank.

You need to ensure that you can view future sign-ins to the mailbox of User1.

You run the Set-AuditConfig -Workload Exchange command.

Does that meet the goal?

A. Yes

B. No

Correct Answer: B

References: https://docs.microsoft.com/en-us/powershell/module/exchange/policy-and-compliance-audit/set-auditconfig?view=exchange-ps

QUESTION 5

You have a Microsoft 365 subscription.

You receive a General Data Protection Regulation (GDPR) request for the custom dictionary of a user.

From the Compliance admin center, you need to create a content search.

How should you configure the content search?

A. Condition: Type Operator. Equals any of Value: Office Roaming Service

B. Condition: Title Operator: Equals any of Value: Normal.dot

C. Condition: Type Operator: Equals any of Value: Documents

D. Condition: File type Operator: Equals any of Value: dic

Correct Answer: D

Since the GDPR request is related to the custom dictionary of a user, we need to search for the files that contain the user\\'s custom dictionary. The custom dictionary files in Microsoft Word are typically saved with a ".dic" file extension.

Therefore, we should configure the content search with a condition that searches for files with the ".dic" file type.

Option A is not correct because it is searching for the Office Roaming Service, which is not related to the custom dictionary.

Option B is not correct because it is searching for files with the "Normal.dot" file name, which is a template file and not related to the custom dictionary.

Option C is not correct because it is searching for files with the "Documents" type, which is too broad and will likely return many irrelevant results.
