## **QUESTION 1**

What is most likely NOT a characteristic of an integration test for a REST API implementation?

- A. The test needs all source and/or target systems configured and accessible.
- B. The test runs immediately after the Mule application has been compiled and packaged.
- C. The test is triggered by an external HTTP request.
- D. The test prepares a known request payload and validates the response payload.

Correct Answer: D

### **QUESTION 2**

An organization makes a strategic decision to move towards an IT operating model that emphasizes consumption of reusable IT assets using modern APIs (as defined by MuleSoft).

What best describes each modern API in relation to this new IT operating model?

- A. Each modern API has its own software development lifecycle, which reduces the need for documentation and automation.
- B. Each modern API must be treated like a product and designed for a particular target audience (for instance, mobile app developers)
- C. Each modern API must be easy to consume, so should avoid complex authentication mechanisms such as SAML or JWT.
- D. Each modern API must be REST and HTTP based.

Correct Answer: B

# **QUESTION 3**

What is true about where an API policy is defined in Anypoint Platform and how it is then applied to API instances?

- A. The API policy is defined in Runtime Manager as part of the API deployment to a Mule runtime, and then ONLY applied to the specific API instance.
- B. The API policy is defined in API Manager for a specific API instance, and then ONLY applied to the specific API instance.
- C. The API policy is defined in API Manager and then automatically applied to ALL API instances.
- D. The API policy is defined in API Manager, and then applied to ALL API instances in the specified environment.

Correct Answer: B

#### **QUESTION 4**

What do the API invocation metrics provided by Anypoint Platform provide?

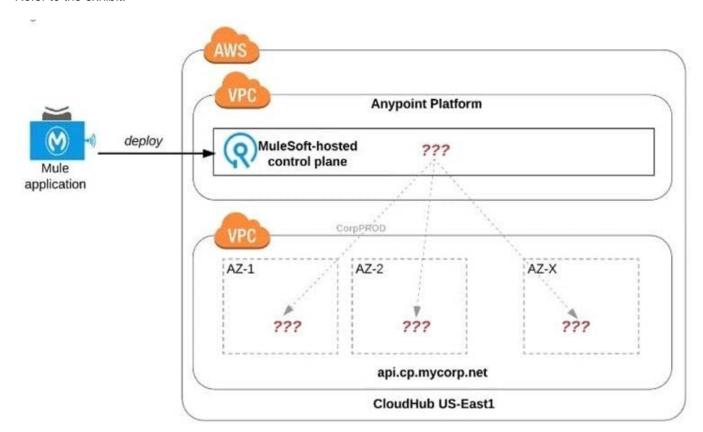

- A. ROI metrics from APIs that can be directly shared with business users
- B. Measurements of the effectiveness of the application network based on the level of reuse
- C. Data on past API invocations to help identify anomalies and usage patterns across various APIs
- D. Proactive identification of likely future policy violations that exceed a given threat threshold

Correct Answer: B

### **QUESTION 5**

Refer to the exhibit.

An organization uses one specific CloudHub (AWS) region for all CloudHub deployments.

How are CloudHub workers assigned to availability zones (AZs) when the organization\\'s Mule applications are deployed to CloudHub in that region?

- A. Workers belonging to a given environment are assigned to the same AZ within that region.
- B. AZs are selected as part of the Mule application\\'s deployment configuration.
