**QUESTION 1**

What is most likely NOT a characteristic of an integration test for a REST API implementation?

A. The test needs all source and/or target systems configured and accessible.

B. The test runs immediately after the Mule application has been compiled and packaged.

C. The test is triggered by an external HTTP request.

D. The test prepares a known request payload and validates the response payload.

Correct Answer: D

**QUESTION 2**

What condition requires using a CloudHub Dedicated Load Balancer?

A. When cross-region load balancing is required between separate deployments of the same Mule application

B. When custom DNS names are required for API implementations deployed to customer-hosted Mule runtimes

C. When API invocations across multiple CloudHub workers must be load balanced

D. When server-side load-balanced TLS mutual authentication is required between API implementations and API clients

Correct Answer: B

**QUESTION 3**

What is typically NOT a function of the APIs created within the framework called API-led connectivity?

A. They provide an additional layer of resilience on top of the underlying backend system, thereby insulating clients from extended failure of these systems.

B. They allow for innovation at the user interface level by consuming the underlying assets without being aware of how data is being extracted from backend systems.

C. They reduce the dependency on the underlying backend systems by helping unlock data from backend systems in a reusable and consumable way.

D. They can compose data from various sources and combine them with orchestration logic to create higher level value

Correct Answer: A

**QUESTION 4**

An API has been updated in Anypoint Exchange by its API producer from version 3.1.1 to 3.2.0 following accepted semantic versioning practices and the changes have been communicated via the API\\'s public portal.

The API endpoint does NOT change in the new version.

How should the developer of an API client respond to this change?

A. The update should be identified as a project risk and full regression testing of the functionality that uses this API should be run.

B. The API producer should be contacted to understand the change to existing functionality.

C. The API producer should be requested to run the old version in parallel with the new one.

D. The API client code ONLY needs to be changed if it needs to take advantage of new features.

Correct Answer: D

---

**QUESTION 5**

What do the API invocation metrics provided by Anypoint Platform provide?

A. ROI metrics from APIs that can be directly shared with business users

B. Measurements of the effectiveness of the application network based on the level of reuse

C. Data on past API invocations to help identify anomalies and usage patterns across various APIs

D. Proactive identification of likely future policy violations that exceed a given threat threshold

Correct Answer: B
