QUESTION 1

Refer to the exhibit.

An organization uses one specific CloudHub (AWS) region for all CloudHub deployments.

How are CloudHub workers assigned to availability zones (AZs) when the organization\\'s Mule applications are deployed to CloudHub in that region?

A. Workers belonging to a given environment are assigned to the same AZ within that region.

B. AZs are selected as part of the Mule application\\'s deployment configuration.

C. Workers are randomly distributed across available AZs within that region.

D. An AZ is randomly selected for a Mule application, and all the Mule application\\'s CloudHub workers are assigned to that one AZ.

Correct Answer: D

QUESTION 2

An organization has several APIs that accept JSON data over HTTP POST. The APIs are all publicly available and are associated with several mobile applications and web applications.

The organization does NOT want to use any authentication or compliance policies for these APIs, but at the same time,

is worried that some bad actor could send payloads that could somehow compromise the applications or servers running the API implementations.

What out-of-the-box Anypoint Platform policy can address exposure to this threat?

A. Shut out bad actors by using HTTPS mutual authentication for all API invocations.

B. Apply an IP blacklist policy to all APIs; the blacklist will include all bad actors.

C. Apply a Header injection and removal policy that detects the malicious data before it is used.

D. Apply a JSON threat protection policy to all APIs to detect potential threat vectors.
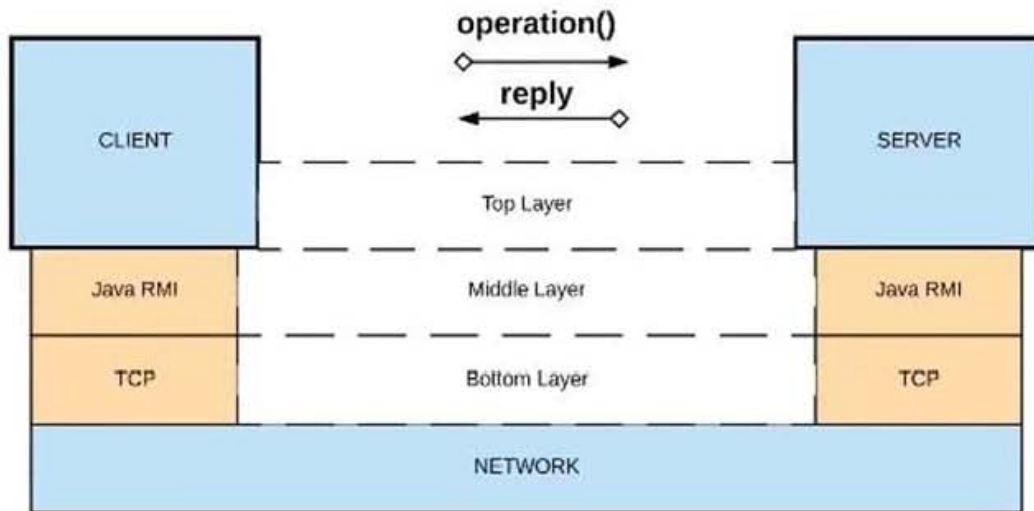

Correct Answer: B

QUESTION 3

Refer to the exhibit.

Generic RPC Architecture
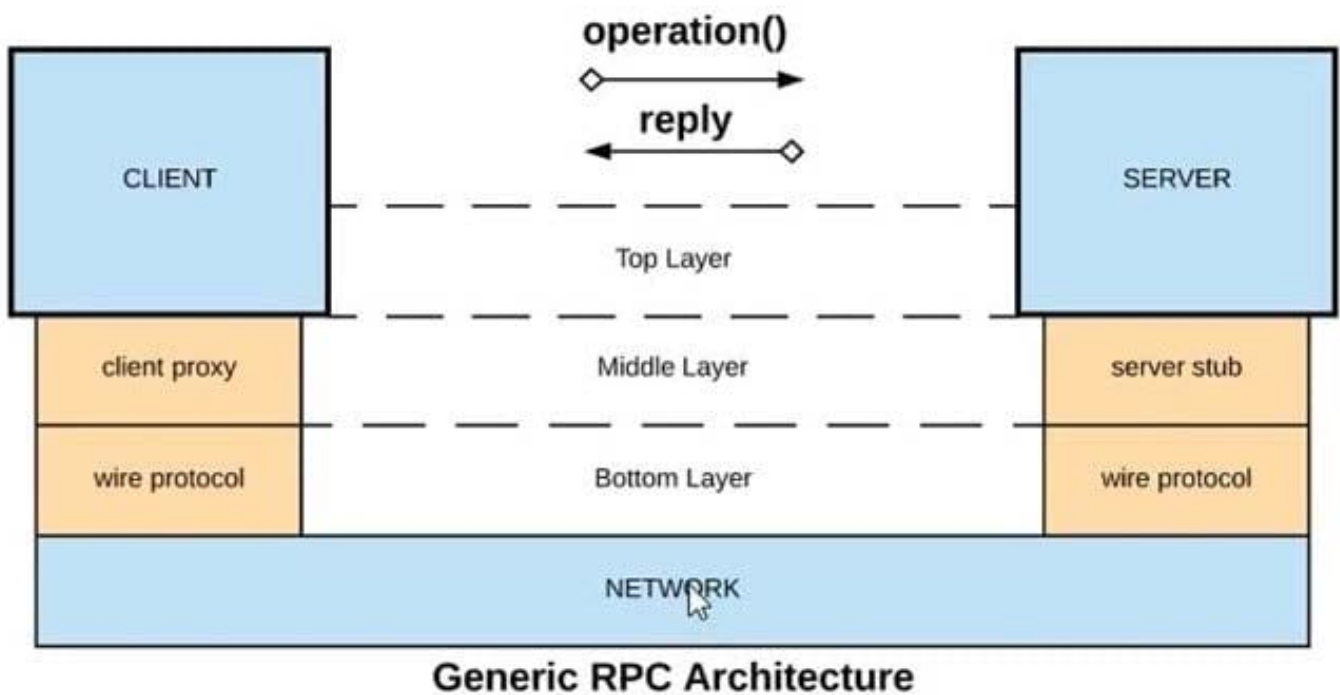

What is a valid API in the sense of API-led connectivity and application networks?
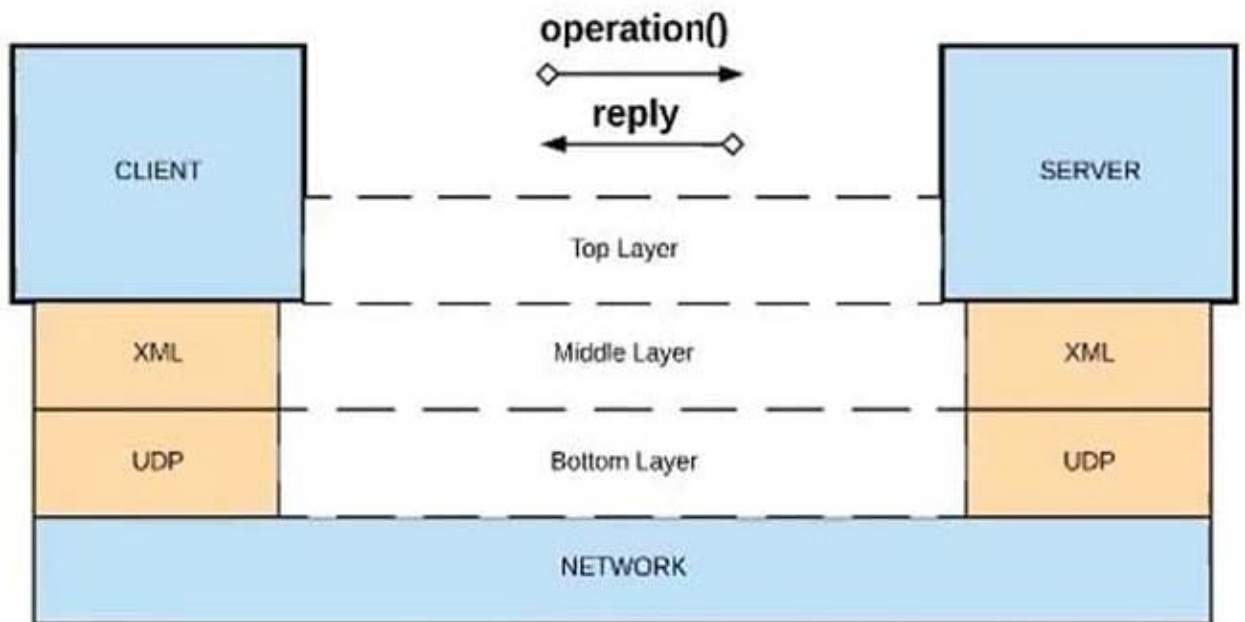

A. Java RMI over TCP

B. XML over HTTP

C. CORBA over IIOP

D. XML over UDP

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: B

QUESTION 4

What correctly characterizes unit tests of Mule applications?

A. They test the validity of input and output of source and target systems.

B. They must be run in a unit testing environment with dedicated Mule runtimes for the environment.

C. They must be triggered by an external client tool or event source.

D. They are typically written using MUnit to run in an embedded Mule runtime that does not require external connectivity.

Correct Answer: B

QUESTION 5

An organization uses various cloud-based SaaS systems and multiple on-premises systems. The on-premises systems are an important part of the organization\\'s application network and can only be accessed from within the organization\\'s intranet.

What is the best way to configure and use Anypoint Platform to support integrations with both the cloud-based SaaS systems and on-premises systems?
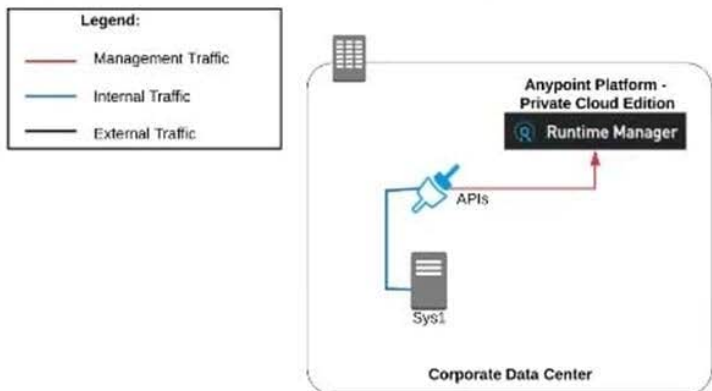

A. Use CloudHub-deployed Mule runtimes in an Anypoint VPC managed by Anypoint Platform Private Cloud Edition control plane.

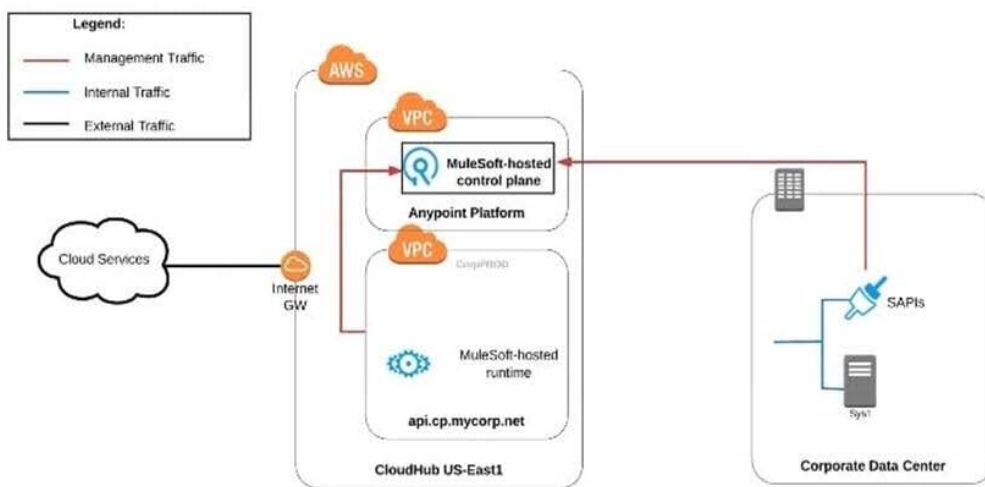

B. Use CloudHub-deployed Mule runtimes in the shared worker cloud managed by the MuleSoft-hosted Anypoint Platform control plane.
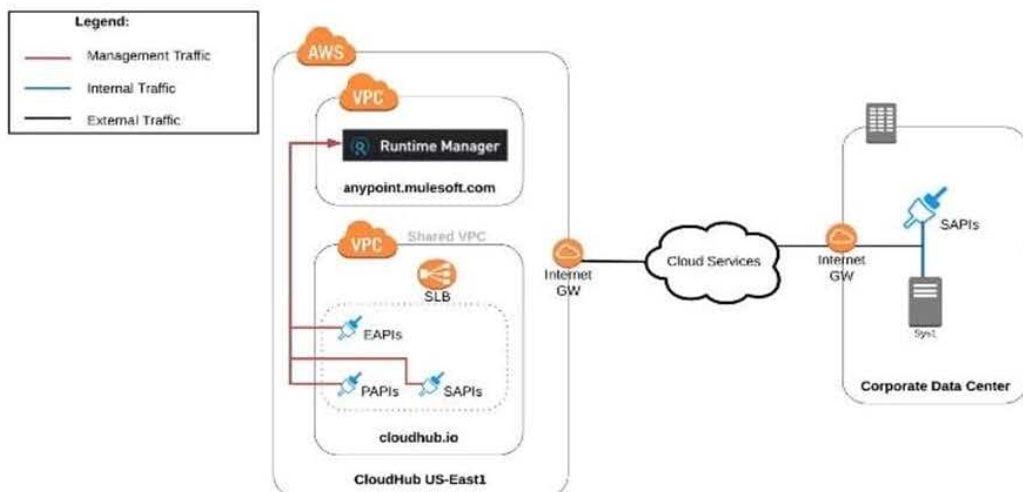

○ C. Use an on-premises installation of Mule runtimes that are completely isolated with NO external network access, managed by the Anypoint Platform Private Cloud Edition control plane.

○ D. Use a combination of CloudHub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Anypoint Platform control plane.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: B
