QUESTION 1

An administrator needs to open ports in the firewall for both DNS and eDNS.

Which of the following default ports would need to be opened on the firewall? (Select TWO).

- A. TCP 23
- B. TCP 53
- C. TCP 123
- D. UDP 23
- E. UDP 53
- F. UDP 123

Correct Answer: BE

QUESTION 2

Which of the following STP states indicates an inactivated port due to a loop?

- A. Disabled
- B. Learning
- C. Blocking
- D. Forwarding

Correct Answer: C

QUESTION 3

A network technician is concerned that a user is utilizing a company PC for file sharing and using a large amount of the bandwidth. Which of the following tools can be used to identify the IP and MAC address of the user's PC?

- A. System log
- B. History log
- C. Network sniffer
- D. Nslookup

Correct Answer: C

Network sniffer is a computer program or a piece of computer hardware that can intercept and log traffic passing over a digital network or part of a network. As data streams flow across the network, the sniffer captures each packet and, if needed, decodes the packet's raw data, showing the values of various fields in the packet, and analyzes its content according to the appropriate RFC or other specifications.

QUESTION 4

A user's workstation is experiencing multiple errors when trying to open programs.

Which of the following log files should the technician review to assist in troubleshooting these errors?

- A. History Log
- B. Application Log
- C. System Log
- D. Security Log

Correct Answer: B

As application logs provide the user whether application is compatible with system or not. Or what is the cause which is making trouble.

QUESTION 5

A company would like to use the enterprise RADIUS server to authenticate and identify their secure wireless users. Which of the following standards should the company use to facilitate this?

- A. Stateful inspection
- B. WEP
- C. WPA
- D. Open with EAP

Correct Answer: C
