QUESTION 1

An administrator has received the following critical alert:

Node 192.168.148.172 is marked to be detached from metadata The administrator has opened a case with Nutanix and the support engineer has requested more information about the error.

Which two actions should the administrator take in the Health Check dashboard to collect the requested information? (Choose two.)

- A. Create an Entity chart
- B. Open a remote support tunnel.
- C. Run the Log Collector
- D. Run the Nutanix Cluster Check

Correct Answer: CD

QUESTION 2

An administrator has recently added two nodes to an existing three-node vSphere-based Nutanix cluster.

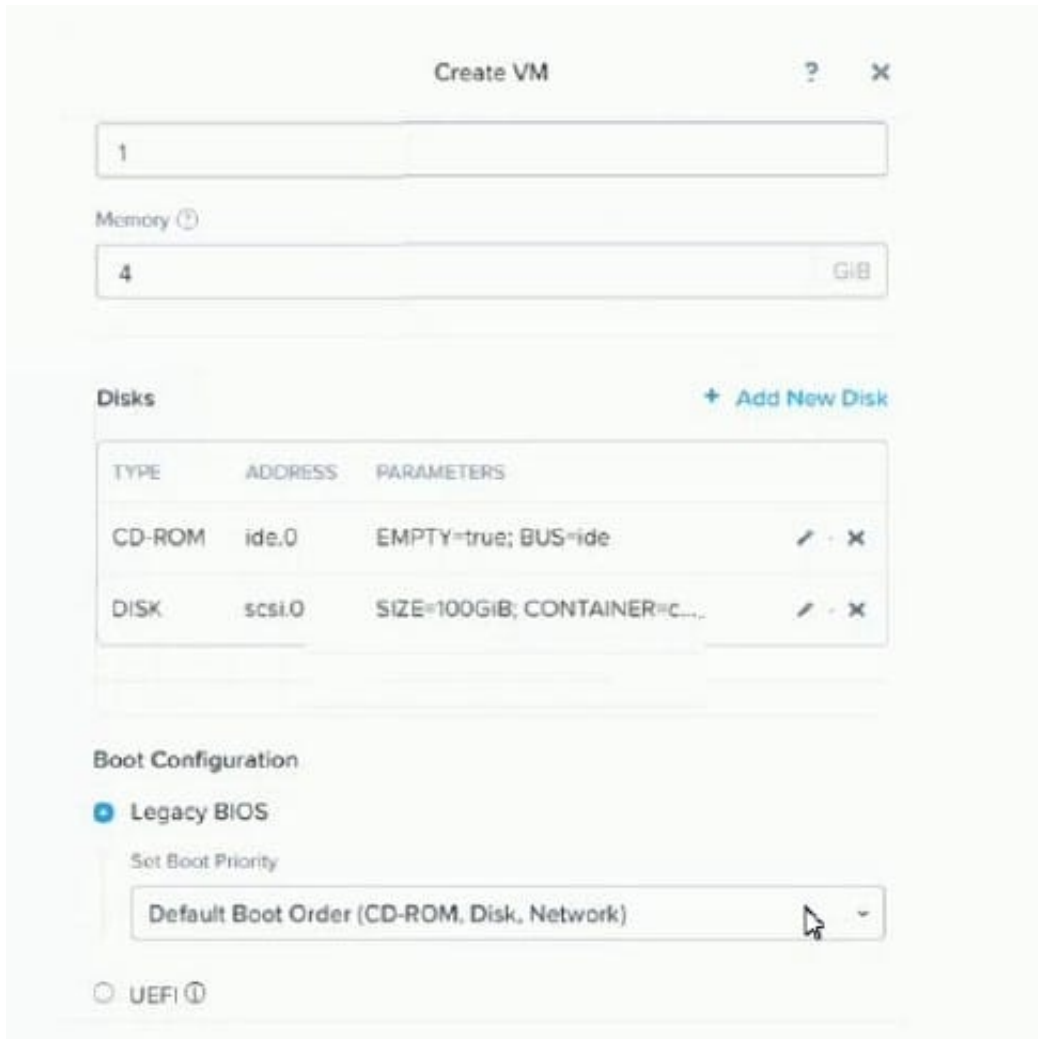

After adding the nodes to the cluster, the administrator tries to migrate a few VMs to the new nodes, but found that no datastore exist on these new nodes yet What action should the administrator take to resolve this issue?

- A. Click Mount on all ESXi hosts on containers
- B. Configure iSCSI Software Adapter on hosts
- C. Configure the firewall to allow NFS datastore access
- D. Add the host IP addresses to cluster whitelists

Correct Answer: A

QUESTION 3

Refer to the exhibit.

The screenshot shows the 'Create VM' configuration window. The Name field contains '1'. The Memory field is set to '4 GiB'. The Disks section shows two disks: a CD-ROM at ide.0 with parameters 'EMPTY=true; BUS=ide', and a DISK at scsi.0 with parameters 'SIZE=100GiB; CONTAINER=c...'. The Boot Configuration section has 'Legacy BIOS' selected, and the 'Set Boot Priority' dropdown is set to 'Default Boot Order (CD-ROM, Disk, Network)'. The 'UEFI' option is unselected.

The reference exhibit above is from a newly-created VM. When the administrator powers on the VM, GuestOS installation is not happening.

What is causing this issue?

- A. Network boot is happening
- B. The GuestOS installer is corrupted
- C. The SCSI disk is corrupted
- D. GuestOS installer is not loaded in the CD-ROM

Correct Answer: D

QUESTION 4

An application vendor had provided a VHD disk for their pre-configured virtual machine.

A Nutanix cluster administrator imported that VHD disk into Image Configuration, but the disk does not list

while using Clone from Image Service.

Before uploading the vDisk again, which two actions should the administrator perform? (Choose two.)

- A. Convert VHD to QCOW before uploading
- B. Verify correct container is selected
- C. Verify the Image is as type Disk
- D. Verify the Image is Active

Correct Answer: AC

QUESTION 5

An administrator wants a VM to communicate with two separate VLANs. What steps should the administrator complete?

- A. Add two NICs to the VM and configure one for each VLAN
- B. Add a single NIC to the VM and configure it for both VLANs
- C. Turn on IPAM for autoconfiguration of VLANs
- D. Configure a Security Policy to assign VLANs to the VM

Correct Answer: A
