QUESTION 1

Which of the following instructions should a nurse give a client who is about to undergo pelvic ultrasonography?

- A. "Urinate prior to the test."
- B. "Have someone drive you home."
- C. "Do not drink after midnight."
- D. "Drink plenty of water."

Correct Answer: D

A full bladder is required to serve as a landmark to define pelvic organs. No sedation is given, so the client may drive herself home after the test.

QUESTION 2

The nurse teaching about preventable diseases should emphasize the importance of getting the following vaccines _____.

- A. human papilloma virus, genital herpes, measles
- B. pneumonia, HIV, mumps
- C. syphilis, gonorrhea, pneumonia
- D. polio, pertussis, measles

Correct Answer: D

Vaccines are one of the most effective methods of preventing and controlling certain communicable diseases. The smallpox vaccine is not currently in use because the smallpox virus has been declared eradicated from the world's population. Diseases such as polio, diphtheria, pertussis, and measles are mostly controlled by routine childhood immunization. They have not, however, been eradicated, so children need to be immunized against these diseases.

Exam I

QUESTION 3

Which of the following describes the stages of domestic violence in an intimate relationship?

- A. happiness, crisis, angry outburst, intervention
- B. honeymoon period, escalation of stress, outburst, reconciliation
- C. acting out and making up

D. peace and calm, angry outburst, peace and calm, denial

Correct Answer: B

A pattern of behavior known as the cycle of abuse has been described in the literature. It involves a honeymoon stage, followed by a buildup of stress, an angry outburst that might involve beating, reconciliation, and another honeymoon phase.

Clients who do not receive help are at increased risk of harm, which might include homicide.

QUESTION 4

A client and his family facing the end stage of a terminal illness might be best served by _____.

- A. a rehabilitation center
- B. an extended care facility
- C. Hospice
- D. a crisis intervention center

Correct Answer: C

Hospice has the belief that more humanized alternative care for dying clients is needed than is being provided in hospitals, which focus mostly on medical cures. No matter where the care is delivered, Hospice provides a specialized interdisciplinary team of health care professionals who work together to manage client care.

QUESTION 5

Who should document care?

- A. The LPNs should document the care that they provided and the care that was given by unlicensed assistive staff.
- B. The registered nurse must document all of the care that is provided by the nursing assistants because they are accountable for all care.
- C. All staff members should document all of the care that they have provided.
- D. All staff should document all of the care that they have provided but the registered nurse, as the only independent practitioner, signs it.

Correct Answer: C

All staff members, including unlicensed assistive staff like nursing assistants, document and sign, all of the care that they have personally provided. For example, the nursing assistants will document the vital signs that they have taken; the licensed practical nurses will document all of the treatments and medications that they have given to the patient; and the registered nurse will document nursing diagnoses and assessments that they have completed.
