QUESTION 1

AHV IPAM assigns an IP address from the address pool when creating a managed VM NIC. At which two instances does the address release back to the pool? (Choose two.)

- A. The VM is deleted
- B. The IP address lease expires
- C. The IP address is changed to static
- D. The VM NIC is deleted

Correct Answer: AD

An IP address is assigned from the pool of addresses when a managed VM NIC is created; the address is released back to the pool when the VM NIC or VM is deleted. Be sure to work with your network team to reserve a range of addresses for VMs before enabling the IPAM feature to avoid address overlap.
