## QUESTION 1

Which process should a cluster administrator follow to determine the uplink bond configuration node?

- A. Log into the Nutanix CVM and execute the command `manage_ovs_update_uplinks`
- B. Log into the Nutanix AHV host and execute the command `ovs-appctl bond.show`
- C. Log into the Nutanix AHV host and execute the command `ifconfig br0`
- D. Log into the Nutanix CVM and execute the command `ovs-vsctl show`

Correct Answer: B

---

## QUESTION 2

An administrator is implementing a VDI solution. The workload will be a series of persistent desktops in a dedicated storage container within a four-node cluster. Storage optimizations should be set on the dedicated storage container to give optimal performance including during a node failure event.

Which storage optimizations should the administrator set to meet the requirements?

- A. Compression only
- B. Deduplication and Erasure Coding
- C. Compression and Deduplication
- D. Compression Deduplication and Erasure Coding

Correct Answer: C

---

## QUESTION 3

Anti-affinity rules have been configured for two VMs on a Nutanix cluster.

What occurs when an administrator manually live-migrates one VM onto the node hosting the second VM?

- A. The migration fails and an alert is generated in Prism.
- B. The migration fails because the VM-Host affinity needs to be configured.
- C. The migration succeeds and the scheduler migrates one VM off of the node after a period of time.
- D. The migration succeeds and the VMs continue to run on the host until one VM is manually migrated.

Correct Answer: C

---

## QUESTION 4

In which two scenarios is an automated live migration likely to occur? (Choose two)

- A. Cluster resource hotspot
- B. AOS upgrade
- C. Network upgrade
- D. Hypervisor upgrade

Correct Answer: AD

---

## QUESTION 5

How should an administrator enable secure access to Volumes using a password?

- A. iSER
- B. CHAP
- C. SAML
- D. LDAP

Correct Answer: B

<https://portal.nutanix.com/page/documents/details/?targetId=Web-Console-Guide-Prism-v50:wc-block-services-enabling-t.html>

Provision storage on the Nutanix cluster by creating a volume group. Create a client whitelist to enable access to the volume group by using the IP addresses or client initiator IQNs in a whitelist (as part of the volume group configuration). Create a secret for the volume group if you are using CHAP authentication.
