QUESTION 1

An administrator needs to boot a VM to a bootable CD. The administrator tries to configure the VM to boot to it, select to add disk, and goes to the images available. The image for the bootable CD is unavailable. What is the Likely issue?

- A. The CD-ROM interface is too slow.
- B. The administrator selected a disk attached before it can boot to a CD.
- C. The VM needs to have a standard disk attached before it can boot to a CD.
- D. The bootable CD image is corrupted during creation.

Correct Answer: B

QUESTION 2

Which component ensures uniform distribution of data throughout the cluster to eliminate hot spots and speed up rebuilds?

- A. Cassandra
- B. Distributed Storage Fabric
- C. High Availability
- D. Acropolis App Mobility Fabric

Correct Answer: A

QUESTION 3

Which algorithm do snapshots and clones leverage to maximize efficiency and effectiveness?

- A. Continuous Data Protection
- B. Copy-on-Write
- C. Split-mirror
- D. Redirect-On-Write

Correct Answer: D

QUESTION 4

Refer to Exhibit: An administrator is trying to create a custom alert policy for all VMs.

The screenshot shows the configuration for a custom alert policy named "VM CPU Usage". The policy is set to "Performance" impact type and "Warning" severity. Under "Behavioral Anomaly", the "Every time there is an anomaly, alert" option is selected. Under "Static Threshold", the "Alert Critical if" option is selected with a threshold of 95%. The "Alert Warning if" option is present but greyed out and highlighted with a red box. The "Trigger alert if conditions persist for" is set to 240 minutes. The "Auto resolve alerts" and "Enable Policy" options are checked.

Why is the Alert warning if field greyed cut?

- A. The Alert critical if threshold is set.
- B. The Behavioral Anomaly threshold is set.
- C. The Enable Policy option checked.
- D. The Auto resolve alerts option is checked.

Correct Answer: B

Explanation: when you create a custom alert policy, you can choose between two types of thresholds: Static Threshold and Behavioral Anomaly. Static Threshold allows you to set a fixed value for the metric that triggers the alert. Behavioral Anomaly allows you to use machine learning to detect abnormal behavior based on historical data. If you select Behavioral Anomaly as the threshold type, you cannot set a warning level for the alert. You can only set a critical level that indicates how much deviation from normal behavior is considered an anomaly. Therefore, the Alert warning if field is greyed out when you select Behavioral Anomaly.

QUESTION 5

Which three configuration scenarios are valid for the deployment of Prism Central? (Choose three.)

- A. Environments use Network Address Translation.
- B. Prism Elements and Prism Central art in different subnets.
- C. Environments do not have Internet access.
- D. Prism Elements and Prism Central have proxy configured.

E. Environments use the 192.168.5.0/24 CVM management network.

Correct Answer: ACE
