QUESTION 1

Click the Exhibit tab.

```
cluster::> volume show -vserver NewSVM -volume * -fields policy,junction-path
vserver volume policy junction-path
-----
NewSVM root new_policy /
NewSVM vol_nfs policy1 /vol_nfs
2 entries were displayed.

cluster::> export-policy rule show -vserver NewSVM -policyname *
Policy Rule Access Client RO
Vserver Name Index Protocol Match Rule
-----
NewSVM default 1 nfs 0.0.0.0/0 any
NewSVM new_policy 1 nfs 1.2.3.4 sys
NewSVM policy1 1 nfs 192.168.10.10 sys
3 entries were displayed.
```

The customer configured an SVM called "NewSVM" for NFS, configured the volume, "vol_nfs", mounted at "/vol_nfs", and set up NFSv3 as shown in the exhibit. However, if they try to mount from the client with IP address 192.168.10.10, they receive a "permission denied" error.

In this scenario, which action will solve the error condition?

- A. Add a rule to the defaultexport policy to include the-clientmatch 192.168.10.0/24parameter.
- B. Stop and start NewSVM.
- C. Associate a correct export policy to the root volume (/) of NewSVM.
- D. Configure the default route for NewSVM correctly.

Correct Answer: B

QUESTION 2

A Linux client is experiencing low throughput when reading a very large file using NFS. Network counters suggest there is packet drop in the network. To confirm whether dropped packets affect the Linux client, you are collecting network traces from the affected systems. In this scenario, which two actions would be used? (Choose two.)

- A. Use thetcpdumpcommand on the Linux system.
- B. Use thepkttkcommand on the NetApp controller.
- C. Use thetraceroutecommand on the network switch.
- D. Use thetcptracecommand on a Windows client in a separate subnet.

Correct Answer: BC

QUESTION 3

Your customer has a 2-node cluster with two FAS2554 controllers running clustered Data ONTAP 8.3. You want to upgrade non-disruptively to clustered Data ONTAP 8.3.1 using the rolling-upgrade method. Which two operations would you perform before issuing the `~storage failover takeover - ofnode NodeA~` command? (Choose two.)

- A. Upgrade the service processor of all nodes.
- B. Migrate all LIFs used for iSCSI and FC away from NodeA.
- C. Change the default boot image to the new image.
- D. Install the new software image on all nodes.

Correct Answer: BC

QUESTION 4

Your customer using clustered Data ONTAP 8.1.2 recently had a disk drive fail. They already swapped out the failed disk for a replacement disk. They call you the next day explaining that the disk is not showing up in the spare disk pool. In this scenario, what are two reasons for this problem? (Choose two.)

- A. The replacement disk drive needs to be manually un-failed before the disk will show up as a spare.
- B. Autoassign is turned off, leaving the disk unassigned; the customer needs to take ownership of the replaced disk before it will show up as a spare disk.
- C. The disk ID needs to be removed from the failed disk registry before the disk will be seen as a spare.
- D. Autoassign is set to on, but the disk shelves in the loop are shared between a high-availability (HA) pair, causing the disk to show up as unassigned.

Correct Answer: BC

QUESTION 5

A customer recently had a controller module failure on a FAS62xx system running clustered Data ONTAP 8.3.1. The controller module had been replaced last night and everything is working well but the customer noticed warnings concerning licensing on the console. The warnings say there is a grace period of 89 days remaining.

In this scenario, what should be done to solve this problem?

- A. Execute a system restore to recover the previous license keys, and then apply to the new controller module.
- B. Apply the previously used license keys using the appropriate commands.
- C. Collect the new license keys from the new controller module packaging and install them using the appropriate commands.
- D. Obtain new 8.2x format license keys and install them using the appropriate commands.

Correct Answer: D
