**QUESTION 1**

You need to restore a large number of files from a Snapshot copy and grant users read/write access to the restored data using CIFS. For comparison reasons, you must ensure that the currently active data in the volume is preserved.

Which restore method should you use to accomplish this task?

A. Use FlexClone to clone the volume, and specify the Snapshot copy from which to clone.

B. Use SnapRestore to restore the volume, and specify the Snapshot copy from which to restore.

C. Use NDMP to restore the data from the Snapshot copy back to the volume.

D. Grant users read/write access to the Snapshot copy in the snapshot folder of the CIFS share.

Correct Answer: B

**QUESTION 2**

Click the Exhibit button.

```

            mgmt       29    29           102       csiptc-2240-09
                                                             master
csiptc-2240-09
            vldb       26    26           3         csiptc-2240-09
                                                             secondary
csiptc-2240-09
            vifmgr     53    53           37        csiptc-2240-09
                                                             master
csiptc-2240-09
            bcomd      26    26           1         csiptc-2240-09
                                                             master
csiptc-2240-10
            mgmt       29    29           102       csiptc-2240-09
                                                             secondary
csiptc-2240-10
            vldb       26    26           3         csiptc-2240-10
                                                             master
csiptc-2240-10
            vifmgr     53    53           37        csiptc-2240-09
                                                             secondary
csiptc-2240-10
            bcomd      26    26           1         csiptc-2240-09
                                                             offline
```

On a ONTAP system, CLI commands for adding an initiator to an igroup on csiptc-2240-10 are failing, even when attempted several times on node csiptc-2440-10. However, the command works on node 09. You can create a volume on both nodes.

Referring to the exhibit, which two statements are true? (Choose two.)

A. vldb is functioning on both nodes.

B. The igroup cannot be created because the vigmgr is secondary on 10.

C. bcomd is causing the commands to fail.

D. mgmt is failing the operation.

Correct Answer: AD

**QUESTION 3**

You have severe database performance issues with a server connected to 8-Gb FC switches to storage. You know that

the problem is not the storage because the QoS output indicates that the issue is outside the controller. You need to examine each piece of the chain, such as switch port status and the host contribution to latency.

In this scenario, which NetApp product would provide the required information?

A. OnCommand Unified Manager

B. OnCommand Insight

C. SnapDrive

D. OnCommand Performance Manager

Correct Answer: D

**QUESTION 4**

You connect your cluster to a new pair of SAN switches and configure several LIFs for FC. You can see the cluster\\'s physical port WWPNs but are unable to see the LIF WWPNs in the FC fabric.

How would you correct this issue?

A. Enable NPIV on the SAN switches.

B. Enable CNA mode on the physical NetApp ports.

C. Enable NPV on the SAN switches.

D. Enable Selective LUN Mapping (SLM) on the NetApp cluster.

Correct Answer: D

**QUESTION 5**

You are provisioning a LUN for a server running Windows Server 2016.

In this scenario, which ONTAP LUN OS type should you use?

A. hyper_v

B. windows

C. windows_2008

D. windows_gpt

Correct Answer: B
